## reportlab.graphics

### textlabels

#Copyright ReportLab Europe Ltd. 2000-2004

#see license.txt for license details

#history <http://www.reportlab.co.uk/cgi-bin/viewcvs.cgi/public/reportlab/trunk/reportlab/graphics/charts/textlabels.py>

### Classes

#### BarChartLabel (Label)

An extended Label allowing for nudging, lines visibility etc

#### Public Attributes

**angle** angle of label: default (0), 90 is vertical, 180 is upside down, etc

**bottomPadding** padding at bottom of box

**boxAnchor** anchoring point of the label

**boxFillColor** the filling color of the box

**boxStrokeColor** border color of the box

**boxStrokeWidth** border width

**boxTarget** one of ('normal','anti','lo','hi')

**dx** delta x - offset

**dy** delta y - offset

**fillColor** label text color

**fixedEnd** None or fixed draw ends +/-

**fixedStart** None or fixed draw starts +/-

**fontName** the name of the font used

**fontSize** the size of the font

**height** the height of the text

**leading**

**leftPadding** padding at left of box

**lineStrokeColor** Color for a drawn line

**lineStrokeWidth** Non-zero for a drawn line

**maxWidth** maximum width the label can grow to

**nudge** Non-zero sign dependent nudge

**rightPadding** padding at right of box

**strokeColor** label text border color

**strokeWidth** label text border width

**text** the actual text to display

**textAnchor** the anchoring point of the text inside the label

**topPadding** padding at top of box

**visible** True if the label is to be drawn

**width** the width of the label

**x**

**y**

### *Example*

```
def demo(self):
    """This shows a label positioned with its top right corner
    at the top centre of the drawing, and rotated 45 degrees."""

    d = Drawing(200, 100)

    # mark the origin of the label
    d.add(Circle(100,90, 5, fillColor=colors.green))

    lab = Label()
    lab.setOrigin(100,90)
    lab.boxAnchor = 'ne'
    lab.angle = 45
    lab.dx = 0
    lab.dy = -20
    lab.boxStrokeColor = colors.green
    lab.setText('Another\nMulti-Line\nString')
    d.add(lab)

    return d
```

### *Properties of Example Widget*

```
angle = 0
bottomPadding = 0
boxAnchor = 'c'
boxFillColor = None
boxStrokeColor = None
boxStrokeWidth = 0.5
boxTarget = 'normal'
dx = 0
dy = 0
fillColor = Color(0,0,0,1)
fixedEnd = None
fixedStart = None
fontName = 'Times-Roman'
fontSize = 10
height = None
leading = None
leftPadding = 0
lineStrokeColor = None
lineStrokeWidth = 0
maxWidth = None
nudge = 0
rightPadding = 0
strokeColor = None
strokeWidth = 0.1
textAnchor = 'start'
topPadding = 0
visible = 1
width = None
x = 0
y = 0
```

## Label(Widget)

A text label to attach to something else, such as a chart axis.

This allows you to specify an offset, angle and many anchor properties relative to the label's origin. It allows, for example, angled multiline axis labels.

### Public Attributes

**angle** angle of label: default (0), 90 is vertical, 180 is upside down, etc

**bottomPadding** padding at bottom of box

**boxAnchor** anchoring point of the label

**boxFillColor** the filling color of the box

**boxStrokeColor** border color of the box

**boxStrokeWidth** border width

**boxTarget** one of ('normal','anti','lo','hi')

**dx** delta x - offset

**dy** delta y - offset

**fillColor** label text color

**fontName** the name of the font used

**fontSize** the size of the font

**height** the height of the text

**leading**

**leftPadding** padding at left of box

**maxWidth** maximum width the label can grow to

**rightPadding** padding at right of box

**strokeColor** label text border color

**strokeWidth** label text border width

**text** the actual text to display

**textAnchor** the anchoring point of the text inside the label

**topPadding** padding at top of box

**visible** True if the label is to be drawn

**width** the width of the label

**x**

**y**

### Example

```
def demo(self):
    """This shows a label positioned with its top right corner
    at the top centre of the drawing, and rotated 45 degrees."""

    d = Drawing(200, 100)

    # mark the origin of the label
    d.add(Circle(100,90, 5, fillColor=colors.green))
```

```
lab = Label()
lab.setOrigin(100,90)
lab.boxAnchor = 'ne'
lab.angle = 45
lab.dx = 0
lab.dy = -20
lab.boxStrokeColor = colors.green
lab.setText('Another\nMulti-Line\nString')
d.add(lab)

return d
```

### *Properties of Example Widget*

```
angle = 0
bottomPadding = 0
boxAnchor = 'c'
boxFillColor = None
boxStrokeColor = None
boxStrokeWidth = 0.5
boxTarget = 'normal'
dx = 0
dy = 0
fillColor = Color(0,0,0,1)
fontName = 'Times-Roman'
fontSize = 10
height = None
leading = None
leftPadding = 0
maxWidth = None
rightPadding = 0
strokeColor = None
strokeWidth = 0.1
textAnchor = 'start'
topPadding = 0
visible = 1
width = None
x = 0
y = 0
```

## **NA\_Label ( BarChartLabel )**

An extended Label allowing for nudging, lines visibility etc

### **Public Attributes**

**angle** angle of label: default (0), 90 is vertical, 180 is upside down, etc

**bottomPadding** padding at bottom of box

**boxAnchor** anchoring point of the label

**boxFillColor** the filling color of the box

**boxStrokeColor** border color of the box

**boxStrokeWidth** border width

**boxTarget** one of ('normal','anti','lo','hi')

**dx** delta x - offset

**dy** delta y - offset

**fillColor** label text color

**fixedEnd** None or fixed draw ends +/-

**fixedStart** None or fixed draw starts +/-

**fontName** the name of the font used

**fontSize** the size of the font

**height** the height of the text

**leading**

**leftPadding** padding at left of box

**lineStrokeColor** Color for a drawn line

**lineStrokeWidth** Non-zero for a drawn line

**maxWidth** maximum width the label can grow to

**nudge** Non-zero sign dependent nudge

**rightPadding** padding at right of box

**strokeColor** label text border color

**strokeWidth** label text border width

**text** Text to be used for N/A values

**textAnchor** the anchoring point of the text inside the label

**topPadding** padding at top of box

**visible** True if the label is to be drawn

**width** the width of the label

**x**

**y**

### *Example*

```
def demo(self):
    """This shows a label positioned with its top right corner
    at the top centre of the drawing, and rotated 45 degrees."""
```

```
d = Drawing(200, 100)

# mark the origin of the label
d.add(Circle(100,90, 5, fillColor=colors.green))

lab = Label()
lab.setOrigin(100,90)
lab.boxAnchor = 'ne'
lab.angle = 45
lab.dx = 0
lab.dy = -20
lab.boxStrokeColor = colors.green
lab.setText('Another\nMulti-Line\nString')
d.add(lab)

return d
```

### *Properties of Example Widget*

```
angle = 0
bottomPadding = 0
boxAnchor = 'c'
boxFillColor = None
boxStrokeColor = None
boxStrokeWidth = 0.5
boxTarget = 'normal'
dx = 0
dy = 0
fillColor = Color(0,0,0,1)
fixedEnd = None
fixedStart = None
fontName = 'Times-Roman'
fontSize = 10
height = None
leading = None
leftPadding = 0
lineStrokeColor = None
lineStrokeWidth = 0
maxWidth = None
nudge = 0
rightPadding = 0
strokeColor = None
strokeWidth = 0.1
text = 'n/a'
textAnchor = 'start'
topPadding = 0
visible = 1
width = None
x = 0
y = 0
```

## doughnut

Doughnut chart

Produces a circular chart like the doughnut charts produced by Excel.  
Can handle multiple series (which produce concentric 'rings' in the chart).

## Classes

### Doughnut (AbstractPieChart)

#### Public Attributes

**data** list of numbers defining sector sizes; need not sum to 1

**direction** 'clockwise' or 'anticlockwise'

**height** height of doughnut bounding box. Need not be same as height.

**labels** optional list of labels to use for each data point

**simpleLabels** If true(default) use String not super duper WedgeLabel

**slices** collection of sector descriptor objects

**startAngle** angle of first slice; like the compass, 0 is due North

**width** width of doughnut bounding box. Need not be same as width.

**x** X position of the chart within its container.

**y** Y position of the chart within its container.

#### Example

```
def demo(self):
    d = Drawing(200, 100)

    dn = Doughnut()
    dn.x = 50
    dn.y = 10
    dn.width = 100
    dn.height = 80
    dn.data = [10,20,30,40,50,60]
    dn.labels = ['a','b','c','d','e','f']

    dn.slices.strokeWidth=0.5
    dn.slices[3].popout = 10
    dn.slices[3].strokeWidth = 2
    dn.slices[3].strokeDashArray = [2,2]
    dn.slices[3].labelRadius = 1.75
    dn.slices[3].fontColor = colors.red
    dn.slices[0].fillColor = colors.darkcyan
    dn.slices[1].fillColor = colors.blueviolet
    dn.slices[2].fillColor = colors.blue
    dn.slices[3].fillColor = colors.cyan
    dn.slices[4].fillColor = colors.aquamarine
    dn.slices[5].fillColor = colors.cadetblue
    dn.slices[6].fillColor = colors.lightcoral

    d.add(dn)
    return d
```

### *Properties of Example Widget*

```
data = [1, 1]
direction = 'clockwise'
height = 100
labels = None
simpleLabels = 1
slices = <reportlab.graphics.widgetbase.TypedPropertyCollection instance at 0x7f8192297e60>
startAngle = 90
width = 100
x = 0
y = 0
```

## Functions

### **sample1( ... )**

Make up something from the individual Sectors

#### *Example*

```
def sample1():
    "Make up something from the individual Sectors"

    d = Drawing(400, 400)
    g = Group()

    s1 = Wedge(centerx=200, centery=200, radius=150, startangleddegrees=0, endangleddegrees=120, radius=150)
    s1.fillColor=colors.red
    s1.strokeColor=None
    d.add(s1)
    s2 = Wedge(centerx=200, centery=200, radius=150, startangleddegrees=120, endangleddegrees=240, radius=150)
    s2.fillColor=colors.green
    s2.strokeColor=None
    d.add(s2)
    s3 = Wedge(centerx=200, centery=200, radius=150, startangleddegrees=240, endangleddegrees=260, radius=150)

    d.add(s4)

    return d
```

**sample2( ... )**

Make a simple demo

*Example*

```
def sample2():  
    "Make a simple demo"  
  
    d = Drawing(400, 400)  
  
    dn = Doughnut()  
    dn.x = 50  
    dn.y = 50  
    dn.width = 300  
    dn.height = 300  
    dn.data = [10,20,30,40,50,60]  
  
    d.add(dn)  
  
    return d
```

**sample3( ... )**

Make a more complex demo

*Example*

```
def sample3():  
    "Make a more complex demo"  
  
    d = Drawing(400, 400)  
    dn = Doughnut()  
    dn.x = 50  
    dn.y = 50  
    dn.width = 300  
    dn.height = 300  
    dn.data = [[10,20,30,40,50,60], [10,20,30,40]]  
    dn.labels = ['a','b','c','d','e','f']  
  
    d.add(dn)  
  
    return d
```

## areas

This module defines a Area mixin classes

## Classes

### PlotArea(Widget)

Abstract base class representing a chart's plot area, pretty unusable by itself.

### Public Attributes

**background** Handle to background object e.g. Rect(0,0,width,height).

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**height** Height of the chart.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

### Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

### Properties of Example Widget

```
background = None
debug = 0
fillColor = None
height = 85
strokeColor = None
strokeWidth = 1
width = 180
x = 20
y = 10
```

## linecharts

This module defines a very preliminary Line Chart example.

### Classes

#### AbstractLineChart (PlotArea)

##### Public Attributes

**background** Handle to background object e.g. Rect(0,0,width,height).

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**height** Height of the chart.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

##### Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

##### Properties of Example Widget

```
background = None
debug = 0
fillColor = None
height = 85
strokeColor = None
strokeWidth = 1
width = 180
x = 20
y = 10
```

## HorizontalLineChart (LineChart)

Line chart with multiple lines.

A line chart is assumed to have one category and one value axis. Despite its generic name this particular line chart class has a vertical value axis and a horizontal category one. It may evolve into individual horizontal and vertical variants (like with the existing bar charts).

Available attributes are:

x: x-position of lower-left chart origin

y: y-position of lower-left chart origin

width: chart width

height: chart height

useAbsolute: disables auto-scaling of chart elements (?)

lineLabelNudge: distance of data labels to data points

lineLabels: labels associated with data values

lineLabelFormat: format string or callback function

groupSpacing: space between categories

joinedLines: enables drawing of lines

strokeColor: color of chart lines (?)

fillColor: color for chart background (?)

lines: style list, used cyclically for data series

valueAxis: value axis object

categoryAxis: category axis object

categoryNames: category names

data: chart data, a list of data series of equal length

## Public Attributes

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Handle to background object e.g. Rect(0,0,width,height).

**categoryAxis** Handle of the category axis.

**categoryNames** List of category names.

**data** Data to be plotted, list of (lists of) numbers.

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**groupSpacing** ? - Likely to disappear.

**height** Height of the chart.

**inFill** Whether infilling should be done.

**joinedLines** Display data points joined with lines if true.

**lineLabelArray** explicit array of line label values, must match size of data if present.

**lineLabelFormat** Formatting string or function used for data point labels.

**lineLabelNudge** Distance between a data point and its label.

**lineLabels** Handle to the list of data point labels.

**lines** Handle of the lines.

**reversePlotOrder** If true reverse plot order.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**useAbsolute** Flag to use absolute spacing values.

**valueAxis** Handle of the value axis.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

### *Example*

```
def demo(self):
    """Shows basic use of a line chart."""

    drawing = Drawing(200, 100)

    data = [
        (13, 5, 20, 22, 37, 45, 19, 4),
        (14, 10, 21, 28, 38, 46, 25, 5)
    ]

    lc = HorizontalLineChart()

    lc.x = 20
    lc.y = 10
    lc.height = 85
    lc.width = 170
    lc.data = data
    lc.lines.symbol = makeMarker('Circle')

    drawing.add(lc)

    return drawing
```

## HorizontalLineChart3D(HorizontalLineChart)

### Public Attributes

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Handle to background object e.g. Rect(0,0,width,height).

**categoryAxis** Handle of the category axis.

**categoryNames** List of category names.

**data** Data to be plotted, list of (lists of) numbers.

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**groupSpacing** ? - Likely to disappear.

**height** Height of the chart.

**inFill** Whether infilling should be done.

**joinedLines** Display data points joined with lines if true.

**lineLabelArray** explicit array of line label values, must match size of data if present.

**lineLabelFormat** Formatting string or function used for data point labels.

**lineLabelNudge** Distance between a data point and its label.

**lineLabels** Handle to the list of data point labels.

**lines** Handle of the lines.

**reversePlotOrder** If true reverse plot order.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**theta\_x**  $dx/dz$

**theta\_y**  $dy/dz$

**useAbsolute** Flag to use absolute spacing values.

**valueAxis** Handle of the value axis.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

**zDepth** depth of an individual series

**zSpace** z gap around series

### Example

```
def demo(self):
    """Shows basic use of a line chart."""

## LineChart (AbstractLineChart)

### Public Attributes

**background** Handle to background object e.g. Rect(0,0,width,height).

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**height** Height of the chart.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

### Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

### Properties of Example Widget

```
background = None
debug = 0
fillColor = None
height = 85
strokeColor = None
strokeWidth = 1
width = 180
x = 20
y = 10
```

## **SampleHorizontalLineChart(HorizontalLineChart)**

Sample class overwriting one method to draw additional horizontal lines.

### **Public Attributes**

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Handle to background object e.g. Rect(0,0,width,height).

**categoryAxis** Handle of the category axis.

**categoryNames** List of category names.

**data** Data to be plotted, list of (lists of) numbers.

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**groupSpacing** ? - Likely to disappear.

**height** Height of the chart.

**inFill** Whether infilling should be done.

**joinedLines** Display data points joined with lines if true.

**lineLabelArray** explicit array of line label values, must match size of data if present.

**lineLabelFormat** Formatting string or function used for data point labels.

**lineLabelNudge** Distance between a data point and its label.

**lineLabels** Handle to the list of data point labels.

**lines** Handle of the lines.

**reversePlotOrder** If true reverse plot order.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**useAbsolute** Flag to use absolute spacing values.

**valueAxis** Handle of the value axis.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

### *Example*

```

## VerticalLineChart (LineChart)

### Public Attributes

**background** Handle to background object e.g. Rect(0,0,width,height).

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**height** Height of the chart.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

### Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

### Properties of Example Widget

```
background = None
debug = 0
fillColor = None
height = 85
strokeColor = None
strokeWidth = 1
width = 180
x = 20
y = 10
```

## Functions

**sample1( ... )**

### Example

```
def sample1():
    drawing = Drawing(400, 200)

## dotbox

### Classes

#### DotBox(Widget)

Returns a dotbox widget.

### Public Attributes

**dotColor** Colour of the circle on the box

**dotDiameter** Diameter of the circle used for the 'dot'

**dotXPosition** X Position of the circle

**dotYPosition** Y Position of the circle

**gridColor** Colour for the box and gridding

**gridDivWidth** Width of each 'box'

**labelFontName** Name of font used for the labels

**labelFontSize** Size of font used for the labels

**labelOffset** Space between label text and grid edge

**strokeWidth** Width of the grid and dot outline

**x** X Position of dotbox

**xlabels** List of text labels for boxes on left hand side

**y** Y Position of dotbox

**ylabels** Text label for second box on left hand side

#### Example

```
def demo(self,drawing=None):
    if not drawing:
        tx,ty=self._getDrawingDimensions()
        drawing = Drawing(tx,ty)
        drawing.add(self.draw())
    return drawing
```

#### Properties of Example Widget

```
dotColor = Color(.909804,.878431,.466667,1)
dotDiameter = 11.338582677165356
dotXPosition = 1
dotYPosition = 1
gridColor = Color(.098039,.301961,.529412,1)
gridDivWidth = 14.173228346456693
labelFontName = 'Helvetica'
labelFontSize = 6
```

```
labelOffset = 5
strokeWidth = 0.5
x = 30
xlabels = ['Value', 'Blend', 'Growth']
y = 5
ylabels = ['Small', 'Medium', 'Large']
```

## axes

Collection of axes for charts.

The current collection comprises axes for charts using cartesian coordinate systems. All axes might have tick marks and labels. There are two dichotomies for axes: one of X and Y flavours and another of category and value flavours.

Category axes have an ordering but no metric. They are divided into a number of equal-sized buckets. Their tick marks or labels, if available, go BETWEEN the buckets, and the labels are placed below to/left of the X/Y-axis, respectively.

Value axes have an ordering AND metric. They correspond to a numeric quantity. Value axis have a real number quantity associated with it. The chart tells it where to go.

The most basic axis divides the number line into equal spaces and has tickmarks and labels associated with each; later we will add variants where you can specify the sampling interval.

The charts using axis tell them where the labels should be placed.

Axes of complementary X/Y flavours can be connected to each other in various ways, i.e. with a specific reference point, like an x/value axis to a y/value (or category) axis. In this case the connection can be either at the top or bottom of the former or at any absolute value (specified in points) or at some value of the former axes in its own coordinate system.

## Classes

### **AdjYValueAxis(YValueAxis)**

A Y-axis applying additional rules.

Depending on the data and some built-in rules, the axis may choose to adjust its range and origin.

## Public Attributes

**abf\_ignore\_zero** Set to True to make the avoidBoundFrac calculations treat zero as non-special

**annotations** list of annotations

**avoidBoundFrac** Fraction of interval to allow above and below.

**avoidBoundSpace** Space to allow above and below.

**drawGridLast** if true draw gridlines after everything else.

**forceZero** Ensure zero in range if true.

**gridEnd** End of grid lines wrt axis origin

**gridStart** Start of grid lines wrt axis origin

**gridStrokeColor** Color of grid lines.

**gridStrokeDashArray** Dash array used for grid lines.

**gridStrokeLineCap** Grid Line cap 0=butt, 1=round 2=square

**gridStrokeLineJoin** Grid Line join 0=miter, 1=round 2=bevel

**gridStrokeMiterLimit** Grid miter limit control miter line joins

**gridStrokeWidth** Width of grid lines.

**hiLLen** extra line length after end of the axis

**joinAxis** Join both axes if true.

**joinAxisMode** Mode used for connecting axis ('left', 'right', 'value', 'points', None).

**joinAxisPos** Position at which to join with other axis.

**keepTickLabelsInside** Ensure tick labels do not project beyond bounds of axis if true

**labelAxisMode** Like joinAxisMode, but for the axis labels

**labelTextFormat** Formatting string or function used for axis labels.

**labelTextPostFormat** Extra Formatting string.

**labelTextScale** Scaling for label tick values.

**labelVOffset** add this to the labels

**labels** Handle of the axis labels.

**leftAxisOrigShiftIPC** Lowest label shift interval ratio.

**leftAxisOrigShiftMin** Minimum amount to shift.

**leftAxisPercent** When true add percent sign to label values.

**leftAxisSkipLL0** Skip/Keep lowest tick label when true/false. Or skiplist

**loLLen** extra line length before start of the axis

**maximumTicks** Maximum number of ticks.

**minimumTickSpacing** Minimum value for distance between ticks.

**origShiftIPC** Lowest label shift interval ratio.

**origShiftMin** Minimum amount to shift.

**origShiftSpecialValue** special value for shift

**rangeRound** How to round the axis limits

**requiredRange** Minimum required value range.

**reverseDirection** If true reverse category direction.

**skipEndL** Skip high/low tick labels

**strokeColor** Color of axis line and ticks.

**strokeDashArray** Dash array used for axis line.

**strokeLineCap** Line cap 0=butt, 1=round 2=square

**strokeLineJoin** Line join 0=miter, 1=round 2=bevel

**strokeMiterLimit** miter limit control miter line joins

**strokeWidth** Width of axis line and ticks.

**style** How values are plotted!

**subGridEnd** End of grid lines wrt axis origin

**subGridStart** Start of grid lines wrt axis origin

**subGridStrokeColor** Color of grid lines.

**subGridStrokeDashArray** Dash array used for grid lines.

**subGridStrokeLineCap** Grid Line cap 0=butt, 1=round 2=square

**subGridStrokeLineJoin** Grid Line join 0=miter, 1=round 2=bevel

**subGridStrokeMiterLimit** Grid miter limit control miter line joins

**subGridStrokeWidth** Width of grid lines.

**subTickHi** sub tick up or right

**subTickLo** sub tick down or left

**subTickNum** Number of axis sub ticks, if >0

**tickAxisMode** Like joinAxisMode, but for the ticks

**tickLeft** Tick length left of the axis.

**tickRight** Tick length right of the axis.

**valueMax** Maximum value on axis.

**valueMin** Minimum value on axis.

**valueStep** Step size used between ticks.

**valueSteps** List of step sizes used between ticks.

**visible** Display entire object, if true.

**visibleAxis** Display axis line, if true.

**visibleGrid** Display axis grid, if true.

**visibleLabels** Display axis labels, if true.

**visibleSubGrid** Display axis sub grid, if true.

**visibleSubTicks** Display axis sub ticks, if true.

**visibleTicks** Display axis ticks, if true.

**zrangePref** Zero range axis limit preference.

#### *Example*

```
def demo(self):
    data = [(10, 20, 30, 42)]
    self.setPosition(100, 10, 80)
    self.configure(data)

    drawing = Drawing(200, 100)
    drawing.add(self)
    return drawing
```

## CALabel (Label)

### Public Attributes

**angle** angle of label: default (0), 90 is vertical, 180 is upside down, etc

**bottomPadding** padding at bottom of box

**boxAnchor** anchoring point of the label

**boxFillColor** the filling color of the box

**boxStrokeColor** border color of the box

**boxStrokeWidth** border width

**boxTarget** one of ('normal','anti','lo','hi')

**dx** delta x - offset

**dy** delta y - offset

**fillColor** label text color

**fontName** the name of the font used

**fontSize** the size of the font

**height** the height of the text

**labelPosFrac** where in the category range [0,1] the labels should be anchored

**leading**

**leftPadding** padding at left of box

**maxWidth** maximum width the label can grow to

**rightPadding** padding at right of box

**strokeColor** label text border color

**strokeWidth** label text border width

**text** the actual text to display

**textAnchor** the anchoring point of the text inside the label

**topPadding** padding at top of box

**visible** True if the label is to be drawn

**width** the width of the label

**x**

**y**

### Example

```
def demo(self):
    """This shows a label positioned with its top right corner
    at the top centre of the drawing, and rotated 45 degrees."""

    d = Drawing(200, 100)

    # mark the origin of the label
    d.add(Circle(100,90, 5, fillColor=colors.green))

    lab = Label()
    lab.setOrigin(100,90)
    lab.boxAnchor = 'ne'
    lab.angle = 45
    lab.dx = 0
```

```
lab.dy = -20
lab.boxStrokeColor = colors.green
lab.setText('Another\nMulti-Line\nString')
d.add(lab)

return d
```

### *Properties of Example Widget*

```
angle = 0
bottomPadding = 0
boxAnchor = 'c'
boxFillColor = None
boxStrokeColor = None
boxStrokeWidth = 0.5
boxTarget = 'normal'
dx = 0
dy = 0
fillColor = Color(0,0,0,1)
fontName = 'Times-Roman'
fontSize = 10
height = None
labelPosFrac = 0.5
leading = None
leftPadding = 0
maxWidth = None
rightPadding = 0
strokeColor = None
strokeWidth = 0.1
textAnchor = 'start'
topPadding = 0
visible = 1
width = None
x = 0
y = 0
```

## **CategoryAxis(\_AxisG)**

Abstract category axis, unusable in itself.

### **Public Attributes**

**annotations** list of annotations

**categoryNames** List of category names.

**drawGridLast** if true draw gridlines after everything else.

**gridEnd** End of grid lines wrt axis origin

**gridStart** Start of grid lines wrt axis origin

**gridStrokeColor** Color of grid lines.

**gridStrokeDashArray** Dash array used for grid lines.

**gridStrokeLineCap** Grid Line cap 0=butt, 1=round 2=square

**gridStrokeLineJoin** Grid Line join 0=miter, 1=round 2=bevel

**gridStrokeMiterLimit** Grid miter limit control miter line joins

**gridStrokeWidth** Width of grid lines.

**hiLLen** extra line length after end of the axis

**hiPad** extra inner space after end of the axis

**joinAxis** Join both axes if true.

**joinAxisPos** Position at which to join with other axis.

**labelAxisMode** Like joinAxisMode, but for the axis labels

**labels** Handle of the axis labels.

**loLLen** extra line length before start of the axis

**loPad** extra inner space before start of the axis

**reverseDirection** If true reverse category direction.

**strokeColor** Color of axis line and ticks.

**strokeDashArray** Dash array used for axis line.

**strokeLineCap** Line cap 0=butt, 1=round 2=square

**strokeLineJoin** Line join 0=miter, 1=round 2=bevel

**strokeMiterLimit** miter limit control miter line joins

**strokeWidth** Width of axis line and ticks.

**style** How common category bars are plotted

**tickShift** Tick shift typically

**visible** Display entire object, if true.

**visibleAxis** Display axis line, if true.

**visibleGrid** Display axis grid, if true.

**visibleLabels** Display axis labels, if true.

**visibleTicks** Display axis ticks, if true.

## **NormalDateXValueAxis(XValueAxis)**

An X axis applying additional rules.

Depending on the data and some built-in rules, the axis displays normalDate values as nicely formatted dates.

The client chart should have NormalDate X values.

### **Public Attributes**

**abf\_ignore\_zero** Set to True to make the avoidBoundFrac calculations treat zero as non-special

**annotations** list of annotations

**avoidBoundFrac** Fraction of interval to allow above and below.

**avoidBoundSpace** Space to allow above and below.

**bottomAxisLabelSlack** Fractional amount used to adjust label spacing

**dailyFreq** True if we are to assume daily data to be ticked at end of month.

**dayOfWeekName** Weekday names.

**drawGridLast** if true draw gridlines after everything else.

**forceDatesEachYear** List of dates in format "31-Dec", "1-Jan". If present they will always be used for tick marks in the current year, rather than the dates chosen by the automatic algorithm. Hyphen compulsory, case of month optional.

**forceEndDate** Flag for enforced displaying of last date value.

**forceFirstDate** Flag for enforced displaying of first date value.

**forceZero** Ensure zero in range if true.

**gridEnd** End of grid lines wrt axis origin

**gridStart** Start of grid lines wrt axis origin

**gridStrokeColor** Color of grid lines.

**gridStrokeDashArray** Dash array used for grid lines.

**gridStrokeLineCap** Grid Line cap 0=butt, 1=round 2=square

**gridStrokeLineJoin** Grid Line join 0=miter, 1=round 2=bevel

**gridStrokeMiterLimit** Grid miter limit control miter line joins

**gridStrokeWidth** Width of grid lines.

**hiLLen** extra line length after end of the axis

**joinAxis** Join both axes if true.

**joinAxisMode** Mode used for connecting axis ('bottom', 'top', 'value', 'points', None).

**joinAxisPos** Position at which to join with other axis.

**keepTickLabelsInside** Ensure tick labels do not project beyond bounds of axis if true

**labelAxisMode** Like joinAxisMode, but for the axis labels

**labelTextFormat** Formatting string or function used for axis labels.

**labelTextPostFormat** Extra Formatting string.

**labelTextScale** Scaling for label tick values.

**labels** Handle of the axis labels.

**loLLen** extra line length before start of the axis

**maximumTicks** Maximum number of ticks.

**minimumTickSpacing** Minimum value for distance between ticks.

**monthName** Month names.

**niceMonth** Flag for displaying months 'nicely'.

**origShiftIPC** Lowest label shift interval ratio.

**origShiftMin** Minimum amount to shift.

**origShiftSpecialValue** special value for shift

**rangeRound** How to round the axis limits

**reverseDirection** If true reverse category direction.

**skipEndL** Skip high/low tick labels

**specialTickClear** clear rather than delete close ticks when forced first/end dates

**specifiedTickDates** Actual tick values to use; no calculations done

**strokeColor** Color of axis line and ticks.

**strokeDashArray** Dash array used for axis line.

**strokeLineCap** Line cap 0=butt, 1=round 2=square

**strokeLineJoin** Line join 0=miter, 1=round 2=bevel

**strokeMiterLimit** miter limit control miter line joins

**strokeWidth** Width of axis line and ticks.

**style** How values are plotted!

**subGridEnd** End of grid lines wrt axis origin

**subGridStart** Start of grid lines wrt axis origin

**subGridStrokeColor** Color of grid lines.

**subGridStrokeDashArray** Dash array used for grid lines.

**subGridStrokeLineCap** Grid Line cap 0=butt, 1=round 2=square

**subGridStrokeLineJoin** Grid Line join 0=miter, 1=round 2=bevel

**subGridStrokeMiterLimit** Grid miter limit control miter line joins

**subGridStrokeWidth** Width of grid lines.

**subTickHi** sub tick up or right

**subTickLo** sub tick down or left

**subTickNum** Number of axis sub ticks, if >0

**tickAxisMode** Like joinAxisMode, but for the ticks

**tickDown** Tick length down the axis.

**tickUp** Tick length up the axis.

**valueMax** Maximum value on axis.

**valueMin** Minimum value on axis.

**valueStep** Step size used between ticks.

**valueSteps** List of step sizes used between ticks.

**visible** Display entire object, if true.

**visibleAxis** Display axis line, if true.

**visibleGrid** Display axis grid, if true.

**visibleLabels** Display axis labels, if true.

**visibleSubGrid** Display axis sub grid, if true.

**visibleSubTicks** Display axis sub ticks, if true.

**visibleTicks** Display axis ticks, if true.

**xLabelFormat** Label format string (e.g. '{mm}/{yy}') or function.

**zrangePref** Zero range axis limit preference.

### *Example*

```
def demo(self):
    self.setPosition(20, 50, 150)
    self.configure([(10,20,30,40,50)])

    d = Drawing(200, 100)
    d.add(self)
    return d

**origShiftMin** Minimum amount to shift.

**origShiftSpecialValue** special value for shift

**rangeRound** How to round the axis limits

**reverseDirection** If true reverse category direction.

**skipEndL** Skip high/low tick labels

**strokeColor** Color of axis line and ticks.

**strokeDashArray** Dash array used for axis line.

**strokeLineCap** Line cap 0=butt, 1=round 2=square

**strokeLineJoin** Line join 0=miter, 1=round 2=bevel

**strokeMiterLimit** miter limit control miter line joins  
**strokeWidth** Width of axis line and ticks.  
**style** How values are plotted!  
**subGridEnd** End of grid lines wrt axis origin  
**subGridStart** Start of grid lines wrt axis origin  
**subGridStrokeColor** Color of grid lines.  
**subGridStrokeDashArray** Dash array used for grid lines.  
**subGridStrokeLineCap** Grid Line cap 0=butt, 1=round 2=square  
**subGridStrokeLineJoin** Grid Line join 0=miter, 1=round 2=bevel  
**subGridStrokeMiterLimit** Grid miter limit control miter line joins  
**subGridStrokeWidth** Width of grid lines.  
**subTickHi** sub tick up or right  
**subTickLo** sub tick down or left  
**subTickNum** Number of axis sub ticks, if >0  
**tickAxisMode** Like joinAxisMode, but for the ticks  
**valueMax** Maximum value on axis.  
**valueMin** Minimum value on axis.  
**valueStep** Step size used between ticks.  
**valueSteps** List of step sizes used between ticks.  
**visible** Display entire object, if true.  
**visibleAxis** Display axis line, if true.  
**visibleGrid** Display axis grid, if true.  
**visibleLabels** Display axis labels, if true.  
**visibleSubGrid** Display axis sub grid, if true.  
**visibleSubTicks** Display axis sub ticks, if true.  
**visibleTicks** Display axis ticks, if true.  
**zrangePref** Zero range axis limit preference.

## **XCategoryAxis(\_XTicks, CategoryAxis)**

X/category axis

### **Public Attributes**

**annotations** list of annotations  
**categoryNames** List of category names.  
**drawGridLast** if true draw gridlines after everything else.  
**gridEnd** End of grid lines wrt axis origin  
**gridStart** Start of grid lines wrt axis origin  
**gridStrokeColor** Color of grid lines.  
**gridStrokeDashArray** Dash array used for grid lines.

**gridStrokeLineCap** Grid Line cap 0=butt, 1=round 2=square

**gridStrokeLineJoin** Grid Line join 0=miter, 1=round 2=bevel

**gridStrokeMiterLimit** Grid miter limit control miter line joins

**gridStrokeWidth** Width of grid lines.

**hiLLen** extra line length after end of the axis

**hiPad** extra inner space after end of the axis

**joinAxis** Join both axes if true.

**joinAxisMode** Mode used for connecting axis ('bottom', 'top', 'value', 'points', None).

**joinAxisPos** Position at which to join with other axis.

**labelAxisMode** Like joinAxisMode, but for the axis labels

**labels** Handle of the axis labels.

**loLLen** extra line length before start of the axis

**loPad** extra inner space before start of the axis

**reverseDirection** If true reverse category direction.

**strokeColor** Color of axis line and ticks.

**strokeDashArray** Dash array used for axis line.

**strokeLineCap** Line cap 0=butt, 1=round 2=square

**strokeLineJoin** Line join 0=miter, 1=round 2=bevel

**strokeMiterLimit** miter limit control miter line joins

**strokeWidth** Width of axis line and ticks.

**style** How common category bars are plotted

**tickDown** Tick length down the axis.

**tickShift** Tick shift typically

**tickUp** Tick length up the axis.

**visible** Display entire object, if true.

**visibleAxis** Display axis line, if true.

**visibleGrid** Display axis grid, if true.

**visibleLabels** Display axis labels, if true.

**visibleTicks** Display axis ticks, if true.

## **XValueAxis(\_XTicks, ValueAxis)**

X/value axis

## **Public Attributes**

**abf\_ignore\_zero** Set to True to make the avoidBoundFrac calculations treat zero as non-special

**annotations** list of annotations

**avoidBoundFrac** Fraction of interval to allow above and below.

**avoidBoundSpace** Space to allow above and below.

**drawGridLast** if true draw gridlines after everything else.

**forceZero** Ensure zero in range if true.

**gridEnd** End of grid lines wrt axis origin

**gridStart** Start of grid lines wrt axis origin

**gridStrokeColor** Color of grid lines.

**gridStrokeDashArray** Dash array used for grid lines.

**gridStrokeLineCap** Grid Line cap 0=butt, 1=round 2=square

**gridStrokeLineJoin** Grid Line join 0=miter, 1=round 2=bevel

**gridStrokeMiterLimit** Grid miter limit control miter line joins

**gridStrokeWidth** Width of grid lines.

**hiLLen** extra line length after end of the axis

**joinAxis** Join both axes if true.

**joinAxisMode** Mode used for connecting axis ('bottom', 'top', 'value', 'points', None).

**joinAxisPos** Position at which to join with other axis.

**keepTickLabelsInside** Ensure tick labels do not project beyond bounds of axis if true

**labelAxisMode** Like joinAxisMode, but for the axis labels

**labelTextFormat** Formatting string or function used for axis labels.

**labelTextPostFormat** Extra Formatting string.

**labelTextScale** Scaling for label tick values.

**labels** Handle of the axis labels.

**loLLen** extra line length before start of the axis

**maximumTicks** Maximum number of ticks.

**minimumTickSpacing** Minimum value for distance between ticks.

**origShiftIPC** Lowest label shift interval ratio.

**origShiftMin** Minimum amount to shift.

**origShiftSpecialValue** special value for shift

**rangeRound** How to round the axis limits

**reverseDirection** If true reverse category direction.

**skipEndL** Skip high/low tick labels

**strokeColor** Color of axis line and ticks.

**strokeDashArray** Dash array used for axis line.

**strokeLineCap** Line cap 0=butt, 1=round 2=square

**strokeLineJoin** Line join 0=miter, 1=round 2=bevel

**strokeMiterLimit** miter limit control miter line joins

**strokeWidth** Width of axis line and ticks.

**style** How values are plotted!

**subGridEnd** End of grid lines wrt axis origin

**subGridStart** Start of grid lines wrt axis origin

**subGridStrokeColor** Color of grid lines.

**subGridStrokeDashArray** Dash array used for grid lines.

**subGridStrokeLineCap** Grid Line cap 0=butt, 1=round 2=square

**subGridStrokeLineJoin** Grid Line join 0=miter, 1=round 2=bevel

**subGridStrokeMiterLimit** Grid miter limit control miter line joins

**subGridStrokeWidth** Width of grid lines.

**subTickHi** sub tick up or right

**subTickLo** sub tick down or left

**subTickNum** Number of axis sub ticks, if >0

**tickAxisMode** Like joinAxisMode, but for the ticks

**tickDown** Tick length down the axis.

**tickUp** Tick length up the axis.

**valueMax** Maximum value on axis.

**valueMin** Minimum value on axis.

**valueStep** Step size used between ticks.

**valueSteps** List of step sizes used between ticks.

**visible** Display entire object, if true.

**visibleAxis** Display axis line, if true.

**visibleGrid** Display axis grid, if true.

**visibleLabels** Display axis labels, if true.

**visibleSubGrid** Display axis sub grid, if true.

**visibleSubTicks** Display axis sub ticks, if true.

**visibleTicks** Display axis ticks, if true.

**zrangePref** Zero range axis limit preference.

#### *Properties of Example Widget*

## Functions

### **sample0a( ... )**

Sample drawing with one xcat axis and two buckets.

#### *Example*

```
def sample0a():
    "Sample drawing with one xcat axis and two buckets."

    drawing = Drawing(400, 200)

    data = [(10, 20)]

    xAxis = XCategoryAxis()
    xAxis.setPosition(75, 75, 300)
    xAxis.configure(data)
    xAxis.categoryNames = ['Ying', 'Yang']
    xAxis.labels.boxAnchor = 'n'
    drawing.add(xAxis)
    return drawing
```

**sample0b( ... )**

Sample drawing with one xcat axis and one bucket only.

*Example*

```
def sample0b():
    "Sample drawing with one xcat axis and one bucket only."

    drawing = Drawing(400, 200)

    data = [(10,)]

    xAxis = XCategoryAxis()
    xAxis.setPosition(75, 75, 300)
    xAxis.configure(data)
    xAxis.categoryNames = ['Ying']
    xAxis.labels.boxAnchor = 'n'
    drawing.add(xAxis)
    return drawing
```

**sample1( ... )**

Sample drawing containing two unconnected axes.

*Example*

```
def sample1():
    "Sample drawing containing two unconnected axes."
    from reportlab.graphics.shapes import _baseGFontNameB
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    xAxis = XCategoryAxis()
    xAxis.setPosition(75, 75, 300)
    xAxis.configure(data)
    xAxis.categoryNames = ['Beer', 'Wine', 'Meat', 'Cannelloni']
    xAxis.labels.boxAnchor = 'n'
    xAxis.labels[3].dy = -15
    xAxis.labels[3].angle = 30
    xAxis.labels[3].fontName = _baseGFontNameB
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample4a( ... )**

Sample drawing, xvalue/yvalue axes, y connected at 100 pts to x.

*Example*

```
def sample4a():
    "Sample drawing, xvalue/yvalue axes, y connected at 100 pts to x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'points'
    xAxis.joinAxisPos = 100
    xAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample4b( ... )**

Sample drawing, xvalue/yvalue axes, y connected at value 35 of x.

*Example*

```
def sample4b():
    "Sample drawing, xvalue/yvalue axes, y connected at value 35 of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'value'
    xAxis.joinAxisPos = 35
    xAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample4c( ... )**

Sample drawing, xvalue/yvalue axes, y connected to bottom of x.

*Example*

```
def sample4c():
    "Sample drawing, xvalue/yvalue axes, y connected to bottom of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'bottom'
    xAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample4c1( ... )**

xvalue/yvalue axes, without drawing axis lines/ticks.

*Example*

```
def sample4c1():
    "xvalue/yvalue axes, without drawing axis lines/ticks."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    yAxis.visibleAxis = 0
    yAxis.visibleTicks = 0
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'bottom'
    xAxis.configure(data)
    xAxis.visibleAxis = 0
    xAxis.visibleTicks = 0
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample4d( ... )**

Sample drawing, xvalue/yvalue axes, y connected to top of x.

*Example*

```
def sample4d():
    "Sample drawing, xvalue/yvalue axes, y connected to top of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'top'
    xAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample5a( ... )**

Sample drawing, xvalue/yvalue axes, y connected at 100 pts to x.

*Example*

```
def sample5a():
    "Sample drawing, xvalue/yvalue axes, y connected at 100 pts to x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    xAxis = XValueAxis()
    xAxis.setPosition(50, 50, 300)
    xAxis.configure(data)
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.joinAxis = xAxis
    yAxis.joinAxisMode = 'points'
    yAxis.joinAxisPos = 100
    yAxis.configure(data)

    yAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample6a( ... )**

Sample drawing, xcat/yvalue axes, x connected at top of y.

*Example*

```
def sample6a():
    "Sample drawing, xcat/yvalue axes, x connected at top of y."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XCategoryAxis()
    xAxis._length = 300
    xAxis.configure(data)
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'top'
    xAxis.categoryNames = ['Beer', 'Wine', 'Meat', 'Cannelloni']
    xAxis.labels.boxAnchor = 'n'
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample6b( ... )**

Sample drawing, xcat/yvalue axes, x connected at bottom of y.

*Example*

```
def sample6b():
    "Sample drawing, xcat/yvalue axes, x connected at bottom of y."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XCategoryAxis()
    xAxis._length = 300
    xAxis.configure(data)
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'bottom'
    xAxis.categoryNames = ['Beer', 'Wine', 'Meat', 'Cannelloni']
    xAxis.labels.boxAnchor = 'n'
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample6c( ... )**

Sample drawing, xcat/yvalue axes, x connected at 100 pts to y.

*Example*

```
def sample6c():
    "Sample drawing, xcat/yvalue axes, x connected at 100 pts to y."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XCategoryAxis()
    xAxis._length = 300
    xAxis.configure(data)
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'points'
    xAxis.joinAxisPos = 100
    xAxis.categoryNames = ['Beer', 'Wine', 'Meat', 'Cannelloni']
    xAxis.labels.boxAnchor = 'n'
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample6d( ... )**

Sample drawing, xcat/yvalue axes, x connected at value 20 of y.

*Example*

```
def sample6d():
    "Sample drawing, xcat/yvalue axes, x connected at value 20 of y."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    yAxis = YValueAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.configure(data)
    xAxis = XCategoryAxis()
    xAxis._length = 300
    xAxis.configure(data)
    xAxis.joinAxis = yAxis
    xAxis.joinAxisMode = 'value'
    xAxis.joinAxisPos = 20
    xAxis.categoryNames = ['Beer', 'Wine', 'Meat', 'Cannelloni']
    xAxis.labels.boxAnchor = 'n'
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample7a( ... )**

Sample drawing, xvalue/ycat axes, y connected at right of x.

*Example*

```
def sample7a():
    "Sample drawing, xvalue/ycat axes, y connected at right of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.configure(data)
    yAxis = YCategoryAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.joinAxis = xAxis
    yAxis.joinAxisMode = 'right'
    yAxis.categoryNames = ['Beer', 'Wine', 'Meat', 'Cannelloni']
    yAxis.labels.boxAnchor = 'e'
    yAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample7b( ... )**

Sample drawing, xvalue/ycat axes, y connected at left of x.

*Example*

```
def sample7b():
    "Sample drawing, xvalue/ycat axes, y connected at left of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.configure(data)
    yAxis = YCategoryAxis()
    yAxis.setPosition(50, 50, 125)
    yAxis.joinAxis = xAxis
    yAxis.joinAxisMode = 'left'
    yAxis.categoryNames = ['Beer', 'Wine', 'Meat', 'Cannelloni']
    yAxis.labels.boxAnchor = 'e'
    yAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

**sample7c( ... )**

Sample drawing, xvalue/ycat axes, y connected at value 30 of x.

*Example*

```
def sample7c():
    "Sample drawing, xvalue/ycat axes, y connected at value 30 of x."
    drawing = Drawing(400, 200)
    data = [(10, 20, 30, 42)]
    xAxis = XValueAxis()
    xAxis._length = 300
    xAxis.configure(data)
    yAxis = YCategoryAxis()
    yAxis.setPosition(50, 50, 125)

    yAxis.configure(data)
    drawing.add(xAxis)
    drawing.add(yAxis)
    return drawing
```

## **barcharts**

This module defines a variety of Bar Chart components.

The basic flavors are stacked and side-by-side, available in horizontal and vertical versions.

## **Classes**

### **BarChart (PlotArea)**

Abstract base class, unusable by itself.

## **Public Attributes**

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Handle to background object e.g. Rect(0,0,width,height).

**barLabelArray** explicit array of bar label values, must match size of data if present.

**barLabelCallOut** Callout function(label) label.\_callOutInfo = (self,g,rowNo,colNo,x,y,width,height,x00,y00,x0,y0)

**barLabelFormat** Formatting string or function used for bar labels.

**barLabels** Handle to the list of bar labels.

**barRecord** callable(bar,label=labelText,value=value,\*\*kwds) to record bar information

**barSpacing** Width between individual bars.

**barWidth** The width of an individual bar.

**bars** Handle of the individual bars.

**categoryAxis** Handle of the category axis.

**categoryLabelBarOrder** where any label bar should appear first/last

**categoryLabelBarSize** width to leave for a category label to go between categories.

**data** Data to be plotted, list of (lists of) numbers.

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**groupSpacing** Width between groups of bars.

**height** Height of the chart.

**naLabel** Label to use for N/A values.

**reversePlotOrder** If true, reverse common category plot order.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**useAbsolute** Flag to use absolute spacing values; use string of gsb for finer control (g=groupSpacing,s=barSpacing,b=barWidth).

**valueAxis** Handle of the value axis.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

## BarChart3D ( BarChart )

### Public Attributes

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Handle to background object e.g. Rect(0,0,width,height).

**barLabelArray** explicit array of bar label values, must match size of data if present.

**barLabelCallOut** Callout function(label) label.\_callOutInfo = (self,g,rowNo,colNo,x,y,width,height,x00,y00,x0,y0)

**barLabelFormat** Formatting string or function used for bar labels.

**barLabels** Handle to the list of bar labels.

**barRecord** callable(bar,label=labelText,value=value,\*\*kwds) to record bar information

**barSpacing** Width between individual bars.

**barWidth** The width of an individual bar.

**bars** Handle of the individual bars.

**categoryAxis** Handle of the category axis.

**categoryLabelBarOrder** where any label bar should appear first/last

**categoryLabelBarSize** width to leave for a category label to go between categories.

**data** Data to be plotted, list of (lists of) numbers.

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**groupSpacing** Width between groups of bars.

**height** Height of the chart.

**naLabel** Label to use for N/A values.

**reversePlotOrder** If true, reverse common category plot order.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**theta\_x** dx/dz

**theta\_y** dy/dz

**useAbsolute** Flag to use absolute spacing values; use string of gsb for finer control (g=groupSpacing,s=barSpacing,b=barWidth).

**valueAxis** Handle of the value axis.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

**zDepth** depth of an individual series

**zSpace** z gap around series

## HorizontalBarChart ( BarChart )

Horizontal bar chart with multiple side-by-side bars.

## Public Attributes

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Handle to background object e.g. Rect(0,0,width,height).

**barLabelArray** explicit array of bar label values, must match size of data if present.

**barLabelCallOut** Callout function(label) label.\_callOutInfo = (self,g,rowNo,colNo,x,y,width,height,x00,y00,x0,y0)

**barLabelFormat** Formatting string or function used for bar labels.

**barLabels** Handle to the list of bar labels.

**barRecord** callable(bar,label=labelText,value=value,\*\*kwds) to record bar information

**barSpacing** Width between individual bars.

**barWidth** The width of an individual bar.

**bars** Handle of the individual bars.

**categoryAxis** Handle of the category axis.

**categoryLabelBarOrder** where any label bar should appear first/last

**categoryLabelBarSize** width to leave for a category label to go between categories.

**data** Data to be plotted, list of (lists of) numbers.

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**groupSpacing** Width between groups of bars.

**height** Height of the chart.

**naLabel** Label to use for N/A values.

**reversePlotOrder** If true, reverse common category plot order.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**useAbsolute** Flag to use absolute spacing values; use string of gsb for finer control (g=groupSpacing,s=barSpacing,b=barWidth).

**valueAxis** Handle of the value axis.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

### Example

```
def demo(self):
    """Shows basic use of a bar chart"""

## SampleH5c4 (Drawing)

Simple bar chart with absolute spacing.

### Example

```
def __init__(self,width=400,height=200,*args,**kw):
    Drawing.__init__(self,width,height,*args,**kw)
    bc = HorizontalBarChart()
    bc.x = 50
    bc.y = 50
    bc.height = 125
    bc.width = 300
    bc.data = dataSample5
    bc.strokeColor = colors.black

    bc.useAbsolute = 1
    bc.barWidth = 10
    bc.groupSpacing = 20
    bc.barSpacing = 10

    bc.valueAxis.valueMin = 0
    bc.valueAxis.valueMax = 60
    bc.valueAxis.valueStep = 15

    bc.categoryAxis.labels.boxAnchor = 'e'
    bc.categoryAxis.categoryNames = ['Ying', 'Yang']

    self.add(bc,name='HBC')
```

## VerticalBarChart (BarChart)

Vertical bar chart with multiple side-by-side bars.

### Public Attributes

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Handle to background object e.g. Rect(0,0,width,height).

**barLabelArray** explicit array of bar label values, must match size of data if present.

**barLabelCallOut** Callout function(label) label.\_callOutInfo = (self,g,rowNo,colNo,x,y,width,height,x0,y0,x0,y0)

**barLabelFormat** Formatting string or function used for bar labels.

**barLabels** Handle to the list of bar labels.

**barRecord** callable(bar,label=labelText,value=value,\*\*kwds) to record bar information

**barSpacing** Width between individual bars.

**barWidth** The width of an individual bar.

**bars** Handle of the individual bars.

**categoryAxis** Handle of the category axis.

**categoryLabelBarOrder** where any label bar should appear first/last

**categoryLabelBarSize** width to leave for a category label to go between categories.

**data** Data to be plotted, list of (lists of) numbers.

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**groupSpacing** Width between groups of bars.

**height** Height of the chart.

**naLabel** Label to use for N/A values.

**reversePlotOrder** If true, reverse common category plot order.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**useAbsolute** Flag to use absolute spacing values; use string of gsb for finer control (g=groupSpacing,s=barSpacing,b=barWidth).

**valueAxis** Handle of the value axis.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

#### *Example*

```
def demo(self):
    """Shows basic use of a bar chart"""
    if self.__class__.__name__=='BarChart':
        raise NotImplementedError, 'Abstract Class BarChart has no demo'
    drawing = Drawing(200, 100)

## VerticalBarChart3D(BarChart3D, VerticalBarChart)

### Public Attributes

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Handle to background object e.g. Rect(0,0,width,height).

**barLabelArray** explicit array of bar label values, must match size of data if present.

**barLabelCallOut** Callout function(label) label.\_callOutInfo = (self,g,rowNo,colNo,x,y,width,height,x00,y00,x0,y0)

**barLabelFormat** Formatting string or function used for bar labels.

**barLabels** Handle to the list of bar labels.

**barRecord** callable(bar,label=labelText,value=value,\*\*kwds) to record bar information

**barSpacing** Width between individual bars.

**barWidth** The width of an individual bar.

**bars** Handle of the individual bars.

**categoryAxis** Handle of the category axis.

**categoryLabelBarOrder** where any label bar should appear first/last

**categoryLabelBarSize** width to leave for a category label to go between categories.

**data** Data to be plotted, list of (lists of) numbers.

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**groupSpacing** Width between groups of bars.

**height** Height of the chart.

**naLabel** Label to use for N/A values.

**reversePlotOrder** If true, reverse common category plot order.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**theta\_x** dx/dz

**theta\_y** dy/dz

**useAbsolute** Flag to use absolute spacing values; use string of gsb for finer control (g=groupSpacing,s=barSpacing,b=barWidth).

**valueAxis** Handle of the value axis.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

**zDepth** depth of an individual series

**zSpace** z gap around series

### Example

```
def demo(self):
    """Shows basic use of a bar chart"""
    if self.__class__.__name__=='BarChart':
```

```
        raise NotImplementedError, 'Abstract Class BarChart has no demo'
    drawing = Drawing(200, 100)
    bc = self.__class__()
    drawing.add(bc)
    return drawing
```

## Functions

### `sampleH0a( ... )`

Make a slightly pathologic bar chart with only TWO data items.

#### *Example*

```
def sampleH0a():
    "Make a slightly pathologic bar chart with only TWO data items."

    drawing = Drawing(400, 200)

    data = [(13, 20)]

    bc = HorizontalBarChart()
    bc.x = 50
    bc.y = 50
    bc.height = 125
    bc.width = 300
    bc.data = data

    bc.strokeColor = colors.black

    bc.valueAxis.valueMin = 0
    bc.valueAxis.valueMax = 60
    bc.valueAxis.valueStep = 15

    bc.categoryAxis.labels.boxAnchor = 'se'
    bc.categoryAxis.labels.angle = 30
    bc.categoryAxis.categoryNames = ['Ying', 'Yang']

    drawing.add(bc)

    return drawing
```

**sampleH0b( ... )**

Make a pathologic bar chart with only ONE data item.

*Example*

```
def sampleH0b():
    "Make a pathologic bar chart with only ONE data item."

    drawing = Drawing(400, 200)

    data = [(42,)]

    bc = HorizontalBarChart()
    bc.x = 50
    bc.y = 50
    bc.height = 125
    bc.width = 300
    bc.data = data
    bc.strokeColor = colors.black

    bc.valueAxis.valueMin = 0
    bc.valueAxis.valueMax = 50
    bc.valueAxis.valueStep = 15

    bc.categoryAxis.labels.boxAnchor = 'se'
    bc.categoryAxis.labels.angle = 30
    bc.categoryAxis.categoryNames = ['Jan-99']

    drawing.add(bc)

    return drawing
```

**sampleH0c( ... )**

Make a really pathologic bar chart with NO data items at all!

*Example*

```
def sampleH0c():
    "Make a really pathologic bar chart with NO data items at all!"

    drawing = Drawing(400, 200)

    data = [()]

    bc = HorizontalBarChart()
    bc.x = 50
    bc.y = 50
    bc.height = 125
    bc.width = 300
    bc.data = data
    bc.strokeColor = colors.black

    bc.valueAxis.valueMin = 0
    bc.valueAxis.valueMax = 60
    bc.valueAxis.valueStep = 15

    bc.categoryAxis.labels.boxAnchor = 'se'
    bc.categoryAxis.labels.angle = 30
    bc.categoryAxis.categoryNames = []

    drawing.add(bc)

    return drawing
```

**sampleH1( ... )**

Sample of multi-series bar chart.

*Example*

```
def sampleH1():
    "Sample of multi-series bar chart."

    drawing = Drawing(400, 200)

    data = [
        (13, 5, 20, 22, 37, 45, 19, 4),
        (14, 6, 21, 23, 38, 46, 20, 5)
    ]

## lineplots

This module defines a very preliminary Line Plot example.

### Classes

#### AreaLinePlot(LinePlot)

we're given data in the form [(X1,Y11,...Y1M)....(Xn,Yn1,...YnM)]

### Public Attributes

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Handle to background object e.g. Rect(0,0,width,height).

**behindAxes** If true use separate line group.

**data** Data to be plotted, list of (lists of) x/y tuples.

**debug** Used only for debugging.

**fillColor** Color used for background interior of plot area.

**gridFirst** If true use draw grids before axes.

**height** Height of the chart.

**joinedLines** Display data points joined with lines if true.

**lineLabelArray** explicit array of line label values, must match size of data if present.

**lineLabelFormat** Formatting string or function used for data point labels.

**lineLabelNudge** Distance between a data point and its label.

**lineLabels** Handle to the list of data point labels.

**lines** Handle of the lines.

**reversePlotOrder** If true reverse plot order.

**strokeColor** Color used for background border of plot area.

**strokeWidth** Width plot area border.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**xValueAxis** Handle of the x axis.

**y** Y position of the lower-left corner of the chart.

**yValueAxis** Handle of the y axis.

### Example

```
def demo(self):
    """Shows basic use of a line chart."""

    drawing = Drawing(400, 200)

    data = [
        ((1,1), (2,2), (2.5,1), (3,3), (4,5)),
        ((1,2), (2,3), (2.5,2), (3.5,5), (4,6))
    ]

    lp = LinePlot()
    lp.x = 50
```

```

lp.y = 50
lp.height = 125
lp.width = 300
lp.data = data
lp.joinedLines = 1
lp.lineLabelFormat = '%2.0f'
lp.strokeColor = colors.black

lp.lines[0].strokeColor = colors.red
lp.lines[0].symbol = makeMarker('FilledCircle')
lp.lines[1].strokeColor = colors.blue
lp.lines[1].symbol = makeMarker('FilledDiamond')

lp.xValueAxis.valueMin = 0
lp.xValueAxis.valueMax = 5
lp.xValueAxis.valueStep = 1

lp.yValueAxis.valueMin = 0
lp.yValueAxis.valueMax = 7
lp.yValueAxis.valueStep = 1

drawing.add(lp)

return drawing

```

## GridLinePlot(LinePlot)

A customized version of LinePlot.

It uses NormalDateXValueAxis() and AdjYValueAxis() for the X and Y axes.

The chart has a default grid background with thin horizontal lines aligned with the tickmarks (and labels). You can change the background to be any Grid or ShadedRect, or scale the whole chart.

If you do provide a background, you can specify the colours of the stripes with 'background.stripeColors'.

### Public Attributes

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Background for chart area (now Grid or ShadedRect).

**behindAxes** If true use separate line group.

**data** Data to be plotted, list of (lists of) x/y tuples.

**debug** Used only for debugging.

**fillColor** Color used for background interior of plot area.

**gridFirst** If true use draw grids before axes.

**height** Height of the chart.

**joinedLines** Display data points joined with lines if true.

**lineLabelArray** explicit array of line label values, must match size of data if present.

**lineLabelFormat** Formatting string or function used for data point labels.

**lineLabelNudge** Distance between a data point and its label.

**lineLabels** Handle to the list of data point labels.

**lines** Handle of the lines.

**reversePlotOrder** If true reverse plot order.

**scaleFactor** Scalefactor to apply to whole drawing.

**strokeColor** Color used for background border of plot area.

**strokeWidth** Width plot area border.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**xValueAxis** Handle of the x axis.

**y** Y position of the lower-left corner of the chart.

**yValueAxis** Handle of the y axis.

### Example

```

## LinePlot(AbstractLineChart)

Line plot with multiple lines.

Both x- and y-axis are value axis (so there are no separate X and Y versions of this class).

### Public Attributes

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Handle to background object e.g. Rect(0,0,width,height).

**behindAxes** If true use separate line group.

**data** Data to be plotted, list of (lists of) x/y tuples.

**debug** Used only for debugging.

**fillColor** Color used for background interior of plot area.

**gridFirst** If true use draw grids before axes.

**height** Height of the chart.

**joinedLines** Display data points joined with lines if true.

**lineLabelArray** explicit array of line label values, must match size of data if present.

**lineLabelFormat** Formatting string or function used for data point labels.

**lineLabelNudge** Distance between a data point and its label.

**lineLabels** Handle to the list of data point labels.

**lines** Handle of the lines.

**reversePlotOrder** If true reverse plot order.

**strokeColor** Color used for background border of plot area.

**strokeWidth** Width plot area border.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**xValueAxis** Handle of the x axis.

**y** Y position of the lower-left corner of the chart.

**yValueAxis** Handle of the y axis.

### Example

```
def demo(self):
    """Shows basic use of a line chart."""

    drawing = Drawing(400, 200)

    data = [
        ((1,1), (2,2), (2.5,1), (3,3), (4,5)),
        ((1,2), (2,3), (2.5,2), (3.5,5), (4,6))
    ]

    lp = LinePlot()

    lp.x = 50
    lp.y = 50
    lp.height = 125
    lp.width = 300
    lp.data = data
```

```

lp.joinedLines = 1
lp.lineLabelFormat = '%2.0f'
lp.strokeColor = colors.black

lp.lines[0].strokeColor = colors.red
lp.lines[0].symbol = makeMarker('FilledCircle')
lp.lines[1].strokeColor = colors.blue
lp.lines[1].symbol = makeMarker('FilledDiamond')

lp.xValueAxis.valueMin = 0
lp.xValueAxis.valueMax = 5
lp.xValueAxis.valueStep = 1

lp.yValueAxis.valueMin = 0
lp.yValueAxis.valueMax = 7
lp.yValueAxis.valueStep = 1

drawing.add(lp)

return drawing

```

## LinePlot3D(LinePlot)

### Public Attributes

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Handle to background object e.g. Rect(0,0,width,height).

**behindAxes** If true use separate line group.

**data** Data to be plotted, list of (lists of) x/y tuples.

**debug** Used only for debugging.

**fillColor** Color used for background interior of plot area.

**gridFirst** If true use draw grids before axes.

**height** Height of the chart.

**joinedLines** Display data points joined with lines if true.

**lineLabelArray** explicit array of line label values, must match size of data if present.

**lineLabelFormat** Formatting string or function used for data point labels.

**lineLabelNudge** Distance between a data point and its label.

**lineLabels** Handle to the list of data point labels.

**lines** Handle of the lines.

**reversePlotOrder** If true reverse plot order.

**strokeColor** Color used for background border of plot area.

**strokeWidth** Width plot area border.

**theta\_x**  $dx/dz$

**theta\_y**  $dy/dz$

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**xValueAxis** Handle of the x axis.

**y** Y position of the lower-left corner of the chart.

**yValueAxis** Handle of the y axis.

**zDepth** depth of an individual series

**zSpace** z gap around series

## ScatterPlot(LinePlot)

A scatter plot widget

### Public Attributes

**annotations** list of callables, will be called with self, xscale, yscale.

**axisStrokeWidth** Stroke width for both axes

**axisTickLengths** Lenth of the ticks on both axes

**background** Background color (if any)

**behindAxes** If true use separate line group.

**bottomPadding** Padding at bottom of drawing

**data** Data points - a list of x/y tuples.

**debug** Used only for debugging.

**fillColor** Color used for background interior of plot area.

**gridFirst** If true use draw grids before axes.

**height** Height of the area inside the axes

**joinedLines** Display data points joined with lines if true.

**labelOffset** Space between label and Axis (or other labels)

**leftPadding** Padding on left of drawing

**lineLabelArray** explicit array of line label values, must match size of data if present.

**lineLabelFormat** Formatting string or function used for data point labels.

**lineLabelNudge** Distance between a data point and its label.

**lineLabels** Handle to the list of data point labels.

**lines** Handle of the lines.

**outerBorderColor** Color of outer border (if any)

**outerBorderOn** Is there an outer border (continuation of axes)

**reversePlotOrder** If true reverse plot order.

**rightPadding** Padding on right of drawing

**strokeColor** Color used for border of plot area.

**strokeWidth** Width plot area border.

**topPadding** Padding at top of drawing

**width** Width of the area inside the axes

**x** X position of the lower-left corner of the chart.

**xLabel** Label for the whole X-Axis

**xValueAxis** Handle of the x axis.

**y** Y position of the lower-left corner of the chart.

**yLabel** Label for the whole Y-Axis

**yValueAxis** Handle of the y axis.

*Example*

```
def demo(self,drawing=None):
    if not drawing:
        tx,ty=self._getDrawingDimensions()
        drawing = Drawing(tx,ty)
    drawing.add(self.draw())
    return drawing

## **ShadedPolyFiller(Filler, ShadedPolygon)**

### **Public Attributes**

**fillColor** filler interior color

**strokeColor** filler edge color

**strokeWidth** filler edge width

### *Example*

```
def demo(self):  
    msg = "demo() must be implemented for each Widget!"  
    raise shapes.NotImplementedError, msg
```

### *Properties of Example Widget*

## **SplitLinePlot (AreaLinePlot)**

### **Public Attributes**

**annotations** list of callables, will be called with self, xscale, yscale.

**background** Handle to background object e.g. Rect(0,0,width,height).

**behindAxes** If true use separate line group.

**data** Data to be plotted, list of (lists of) x/y tuples.

**debug** Used only for debugging.

**fillColor** Color used for background interior of plot area.

**gridFirst** If true use draw grids before axes.

**height** Height of the chart.

**joinedLines** Display data points joined with lines if true.

**lineLabelArray** explicit array of line label values, must match size of data if present.

**lineLabelFormat** Formatting string or function used for data point labels.

**lineLabelNudge** Distance between a data point and its label.

**lineLabels** Handle to the list of data point labels.

**lines** Handle of the lines.

**reversePlotOrder** If true reverse plot order.

**strokeColor** Color used for background border of plot area.

**strokeWidth** Width plot area border.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**xValueAxis** Handle of the x axis.

**y** Y position of the lower-left corner of the chart.

**yValueAxis** Handle of the y axis.

### *Example*

```
def demo(self):
    """Shows basic use of a line chart."""

    drawing = Drawing(400, 200)

    data = [
        ((1,1), (2,2), (2.5,1), (3,3), (4,5)),
        ((1,2), (2,3), (2.5,2), (3.5,5), (4,6))
    ]

## Functions

### `sample1a( ... )`

A line plot with non-equidistant points in x-axis.

#### *Example*

```
def sample1a():
    "A line plot with non-equidistant points in x-axis."

    drawing = Drawing(400, 200)

    data = [
        ((1,1), (2,2), (2.5,1), (3,3), (4,5)),
        ((1,2), (2,3), (2.5,2), (3.5,5), (4,6))
    ]

    lp = LinePlot()

    lp.x = 50
    lp.y = 50
    lp.height = 125
    lp.width = 300
    lp.data = data
    lp.joinedLines = 1
    lp.strokeColor = colors.black

    lp.lines.symbol = makeMarker('UK_Flag')

    lp.lines[0].strokeWidth = 2
    lp.lines[1].strokeWidth = 4

    lp.xValueAxis.valueMin = 0
    lp.xValueAxis.valueMax = 5
    lp.xValueAxis.valueStep = 1

    lp.yValueAxis.valueMin = 0
    lp.yValueAxis.valueMax = 7
    lp.yValueAxis.valueStep = 1

    drawing.add(lp)

    return drawing
```

**sample1b( ... )**

A line plot with non-equidistant points in x-axis.

*Example*

```
def sample1b():
    "A line plot with non-equidistant points in x-axis."

    drawing = Drawing(400, 200)

    data = [
        ((1,1), (2,2), (2.5,1), (3,3), (4,5)),
        ((1,2), (2,3), (2.5,2), (3.5,5), (4,6))
    ]

    lp = LinePlot()

    lp.x = 50
    lp.y = 50
    lp.height = 125
    lp.width = 300
    lp.data = data
    lp.joinedLines = 1
    lp.lines.symbol = makeMarker('Circle')
    lp.lineLabelFormat = '%2.0f'
    lp.strokeColor = colors.black

    lp.xValueAxis.valueMin = 0
    lp.xValueAxis.valueMax = 5
    lp.xValueAxis.valueSteps = [1, 2, 2.5, 3, 4, 5]
    lp.xValueAxis.labelTextFormat = '%2.1f'

    lp.yValueAxis.valueMin = 0
    lp.yValueAxis.valueMax = 7
    lp.yValueAxis.valueStep = 1

    drawing.add(lp)

    return drawing
```

**sample1c( ... )**

A line plot with non-equidistant points in x-axis.

*Example*

```
def sample1c():
    "A line plot with non-equidistant points in x-axis."

    drawing = Drawing(400, 200)

    data = [
        ((1,1), (2,2), (2.5,1), (3,3), (4,5)),
        ((1,2), (2,3), (2.5,2), (3.5,5), (4,6))
    ]

    lp = LinePlot()

    lp.x = 50
    lp.y = 50
    lp.height = 125
    lp.width = 300
    lp.data = data
    lp.joinedLines = 1
    lp.lines[0].symbol = makeMarker('FilledCircle')
    lp.lines[1].symbol = makeMarker('Circle')
    lp.lineLabelFormat = '%2.0f'
    lp.strokeColor = colors.black

    lp.xValueAxis.valueMin = 0
    lp.xValueAxis.valueMax = 5
    lp.xValueAxis.valueSteps = [1, 2, 2.5, 3, 4, 5]
    lp.xValueAxis.labelTextFormat = '%2.1f'

    lp.yValueAxis.valueMin = 0
    lp.yValueAxis.valueMax = 7
    lp.yValueAxis.valueSteps = [1, 2, 3, 5, 6]

    drawing.add(lp)

    return drawing
```

**sample2( ... )**

A line plot with non-equidistant points in x-axis.

*Example*

```
def sample2():
    "A line plot with non-equidistant points in x-axis."

    drawing = Drawing(400, 200)

    data = [
        ('25/11/1991', 1),

## slidebox

### Classes

#### **SlideBox(Widget)**

Returns a slidebox widget

#### **Public Attributes**

**background** Colour of the background to the drawing (if any)

**bottomPadding** Padding at bottom of drawing

**boxHeight** Height of the boxes

**boxOutlineColor** Colour used to outline the boxes (if any)

**boxOutlineWidth** Width of the box outline (if any)

**boxSpacing** Space between the boxes

**boxWidth** Width of the boxes

**endColor** Color of last box

**labelFillColor** Colour for number insides

**labelFontName** Name of font used for the labels

**labelFontSize** Size of font used for the labels

**labelStrokeColor** Colour for for number outlines

**leftPadding** Padding on left of drawing

**numberOfBoxes** How many boxes there are

**rightPadding** Padding on right of drawing

**sourceLabelFillColor** Colour ink for the 'source' label (bottom right)

**sourceLabelFontName** Name of font used for the 'source' label

**sourceLabelFontSize** Font size for the 'source' label

**sourceLabelOffset** Padding at bottom of drawing

**sourceLabelText** Text used for the 'source' label (can be empty)

**startColor** Color of first box

**topPadding** Padding at top of drawing

**triangleFillColor** Colour of indicator triangles

**triangleHeight** Height of indicator triangles

**trianglePosition** Which box is highlighted by the triangles

**triangleStrokeColor** Colour of indicator triangle outline

**triangleStrokeWidth** Colour of indicator triangle outline

**triangleWidth** Width of indicator triangles

#### *Example*

```
def demo(self,drawing=None):
```

```
from reportlab.lib import colors
if not drawing:
    tx,ty=self._getDrawingDimensions()
    drawing = Drawing(tx,ty)
drawing.add(self.draw())
return drawing
```

Source: ReportLab

triangleWidth = 10.771653543307087
```

## legends

This will be a collection of legends to be used with charts.

## Classes

### Legend(Widget)

A simple legend containing rectangular swatches and strings.

The swatches are filled rectangles whenever the respective color object in 'colorNamePairs' is a subclass of Color in reportlab.lib.colors. Otherwise the object passed instead is assumed to have 'x', 'y', 'width' and 'height' attributes. A legend then tries to set them or catches any error. This lets you plug-in any widget you like as a replacement for the default rectangular swatches.

Strings can be nicely aligned left or right to the swatches.

### Public Attributes

**alignment** Alignment of text with respect to swatches

**autoXPadding** x Padding between columns if deltax=None

**autoYPadding** y Padding between rows if deltay=None

**boxAnchor** Anchor point for the legend area

**callout** a user callout(self,g,x,y,(color,text))

**colEndCallout** a user callout(self,g, x, xt, y,width, lWidth)

**colorNamePairs** List of color/name tuples (color can also be widget)

**columnMaximum** Max. number of items per column

**deltax** x-distance between neighbouring swatches

**deltay** y-distance between neighbouring swatches

**dividerColor** dividerLines color

**dividerDashArray** Dash array for dividerLines.

**dividerLines** If 1 we have dividers between the rows | 2 for extra top | 4 for bottom

**dividerOffsX** divider lines X offsets

**dividerOffsY** dividerLines Y offset

**dividerWidth** dividerLines width

**dx** Width of swatch rectangle

**dxTextSpace** Distance between swatch rectangle and text

**dy** Height of swatch rectangle

**fillColor** swatches filling color

**fontName** Font name of the strings

**fontSize** Font size of the strings

**strokeColor** Border color of the swatches

**strokeWidth** Width of the border color of the swatches

**subCols** subColumn properties

**swatchCallout** a user swatch callout(self,g,x,y,i,(col,name),swatch)

**swatchMarker** None, Auto() or makeMarker('Diamond') ...

**swdx** x position adjustment for the swatch

**swdy** y position adjustment for the swatch

**variColumn** If true column widths may vary (default is false)

**x** x-coordinate of upper-left reference point

**y** y-coordinate of upper-left reference point

**yGap** Additional gap between rows

### Example

```
def demo(self):
    "Make sample legend."

    d = Drawing(200, 100)

    legend = Legend()
    legend.alignment = 'left'
    legend.x = 0
    legend.y = 100
    legend.dxTextSpace = 5
    items = 'red green blue yellow pink black white'.split()
    items = map(lambda i:(getattr(colors, i), i), items)
    legend.colorNamePairs = items

    d.add(legend, 'legend')

    return d
```

### Properties of Example Widget

```
alignment = 'left'
autoXPadding = 5
autoYPadding = 2
boxAnchor = 'nw'
colEndCallout = None
colorNamePairs = [(Color(1,0,0,1), 'red'),
                  (Color(0,0,1,1), 'blue'),
                  (Color(0,.501961,0,1), 'green'),
                  (Color(1,.752941,.796078,1), 'pink'),
                  (Color(1,1,0,1), 'yellow')]
columnMaximum = 3
deltax = 75
deltay = 20
dividerColor = Color(0,0,0,1)
dividerDashArray = None
dividerLines = 0
dividerOffsX = (0, 0)
dividerOffsY = 0
dividerWidth = 0.5
dx = 10
dxTextSpace = 10
dy = 10
fillColor = Color(0,0,0,1)
fontName = 'Times-Roman'
fontSize = 10
strokeColor = Color(0,0,0,1)
strokeWidth = 1
subCols = <reportlab.graphics.widgetbase.TypedPropertyCollection instance at 0x7f8191dc1680>
swatchMarker = None
swdx = 0
swdy = 0
variColumn = 0
```

```
x = 0  
y = 0  
yGap = 0
```

## LineLegend ( Legend )

A subclass of Legend for drawing legends with lines as the swatches rather than rectangles. Useful for lineCharts and linePlots. Should be similar in all other ways the the standard Legend class.

### Public Attributes

**alignment** Alignment of text with respect to swatches

**autoXPadding** x Padding between columns if deltax=None

**autoYPadding** y Padding between rows if deltax=None

**boxAnchor** Anchor point for the legend area

**callout** a user callout(self,g,x,y,(color,text))

**colEndCallout** a user callout(self,g, x, xt, y,width, lWidth)

**colorNamePairs** List of color/name tuples (color can also be widget)

**columnMaximum** Max. number of items per column

**deltax** x-distance between neighbouring swatches

**deltay** y-distance between neighbouring swatches

**dividerColor** dividerLines color

**dividerDashArray** Dash array for dividerLines.

**dividerLines** If 1 we have dividers between the rows | 2 for extra top | 4 for bottom

**dividerOffsX** divider lines X offsets

**dividerOffsY** dividerLines Y offset

**dividerWidth** dividerLines width

**dx** Width of swatch rectangle

**dxTextSpace** Distance between swatch rectangle and text

**dy** Height of swatch rectangle

**fillColor** swatches filling color

**fontName** Font name of the strings

**fontSize** Font size of the strings

**strokeColor** Border color of the swatches

**strokeWidth** Width of the border color of the swatches

**subCols** subColumn properties

**swatchCallout** a user swatch callout(self,g,x,y,i,(col,name),swatch)

**swatchMarker** None, Auto() or makeMarker('Diamond') ...

**swdx** x position adjustment for the swatch

**swdy** y position adjustment for the swatch

**variColumn** If true column widths may vary (default is false)

**x** x-coordinate of upper-left reference point

**y** y-coordinate of upper-left reference point

**yGap** Additional gap between rows*Example*

```
def demo(self):
    "Make sample legend."

    d = Drawing(200, 100)

    legend = Legend()
    legend.alignment = 'left'
    legend.x = 0
    legend.y = 100
    legend.dxTextSpace = 5
    items = 'red green blue yellow pink black white'.split()
    items = map(lambda i:(getattr(colors, i), i), items)
    legend.colorNamePairs = items

    d.add(legend, 'legend')

    return d
```

*Properties of Example Widget*

```
alignment = 'left'
autoXPadding = 5

## LineSwatch(Widget)

basically a Line with properties added so it can be used in a LineLegend

### Public Attributes

**height** used for line strokeWidth

**strokeColor** color of swatch line

**strokeDashArray** dash array for swatch line

**width** length of swatch line

**x** x-coordinate for swatch line start point

**y** y-coordinate for swatch line start point

### Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

### Properties of Example Widget

```
height = 1
strokeColor = Color(1,0,0,1)
strokeDashArray = None
width = 20
x = 0
y = 0
```

## Functions

### `sample1c( ... )`

Make sample legend.

#### *Example*

```
def sample1c():
    "Make sample legend."

    d = Drawing(200, 100)

    legend = Legend()
    legend.alignment = 'right'
    legend.x = 0
    legend.y = 100
    legend.dxTextSpace = 5
    items = 'red green blue yellow pink black white'.split()
    items = map(lambda i:(getattr(colors, i), i), items)
    legend.colorNamePairs = items

    d.add(legend, 'legend')

    return d
```

 red	 yellow	 white
 green	 pink	
 blue	 black	

**sample2c( ... )**

Make sample legend.

*Example*

```
def sample2c():
    "Make sample legend."

    d = Drawing(200, 100)

    legend = Legend()
    legend.alignment = 'right'
    legend.x = 20
    legend.y = 90
    legend.deltax = 60
    legend.dxTextSpace = 10
    legend.columnMaximum = 4
    items = 'red green blue yellow pink black white'.split()
    items = map(lambda i:(getattr(colors, i), i), items)
    legend.colorNamePairs = items

    d.add(legend, 'legend')

    return d
```

	red		pink
	green		black
	blue		white
	yellow		

**sample3( ... )**

Make sample legend with line swatches.

*Example*

```
def sample3():
    "Make sample legend with line swatches."

    d = Drawing(200, 100)

    legend = LineLegend()
    legend.alignment = 'right'
    legend.x = 20
    legend.y = 90
    legend.deltax = 60
    legend.dxTextSpace = 10
    legend.columnMaximum = 4
    items = 'red green blue yellow pink black white'.split()
    items = map(lambda i:(getattr(colors, i), i), items)
    legend.colorNamePairs = items
    d.add(legend, 'legend')

    return d
```

	red		pink
	green		black
	blue		white
	yellow		

**sample3a( ... )**

Make sample legend with line swatches and dasharrays on the lines.

*Example*

```
def sample3a():
    "Make sample legend with line swatches and dasharrays on the lines."

    d = Drawing(200, 100)

    legend = LineLegend()
    legend.alignment = 'right'
    legend.x = 20
    legend.y = 90
    legend.deltax = 60
    legend.dxTextSpace = 10
    legend.columnMaximum = 4
    items = 'red green blue yellow pink black white'.split()
    darrays = ([2,1], [2,5], [2,2,5,5], [1,2,3,4], [4,2,3,4], [1,2,3,4,5,6], [1])
    cnp = []
    for i in range(0, len(items)):
        l = LineSwatch()
        l.strokeColor = getattr(colors, items[i])
        l.strokeDashArray = darrays[i]
        cnp.append((l, items[i]))
    legend.colorNamePairs = cnp
    d.add(legend, 'legend')

    return d
```

...	red	- -	pink
■ ■	green	..	black
■ ■	blue		white
■ ■	yellow		

## piecharts

Basic Pie Chart class.

This permits you to customize and pop out individual wedges;  
supports elliptical and circular pies.

## Classes

### **AbstractPieChart (PlotArea)**

#### **Public Attributes**

**background** Handle to background object e.g. Rect(0,0,width,height).

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**height** Height of the chart.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

#### *Example*

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

#### *Properties of Example Widget*

```
background = None
debug = 0
fillColor = None
height = 85
strokeColor = None
strokeWidth = 1
width = 180
x = 20
y = 10
```

## **LegendedPie(Pie)**

Pie with a two part legend (one editable with swatches, one hidden without swatches).

### **Public Attributes**

**background** Handle to background object e.g. Rect(0,0,width,height).

**bottomPadding** Padding at bottom of drawing

**checkLabelOverlap** If true check and attempt to fix standard label overlaps(default off)

**data** list of numbers defining wedge sizes; need not sum to 1

**debug** Used only for debugging.

**direction** 'clockwise' or 'anticlockwise'

**drawLegend** If true then create and draw legend

**fillColor** Color of the plot area interior.

**height** Height of the chart.

**labels** optional list of labels to use for each data point

**leftPadding** Padding on left of drawing

**legend1** Handle to legend for pie

**legendNumberFormat** Formatting routine for number on right hand side of legend.

**legendNumberOffset** Horizontal space between legend and numbers on r/hand side

**legend\_data** Numbers used on r/hand side of legend (or None)

**legend\_names** Names used in legend (or None)

**orderMode** None

**other\_threshold** A value for doing thresholding, not used yet.

**pieAndLegend\_colors** Colours used for both swatches and pie

**pointerLabelMode**

**rightPadding** Padding on right of drawing

**sameRadii** If true make x/y radii the same(default off)

**simpleLabels** If true(default) use String not super duper WedgeLabel

**slices** collection of wedge descriptor objects

**startAngle** angle of first slice; like the compass, 0 is due North

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**topPadding** Padding at top of drawing

**wedgeRecord** callable(wedge,\*args,\*\*kws)

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**xradius** X direction Radius

**y** Y position of the lower-left corner of the chart.

**yradius** Y direction Radius

*Example*

```
def demo(self, drawing=None):
    if not drawing:
        tx,ty = self._getDrawingDimensions()
        drawing = Drawing(tx, ty)
        drawing.add(self.draw())
    return drawing
```

*Properties of Example Widget*

```

## Pie(AbstractPieChart)

### Public Attributes

**background** Handle to background object e.g. Rect(0,0,width,height).

**checkLabelOverlap** If true check and attempt to fix standard label overlaps(default off)

**data** list of numbers defining wedge sizes; need not sum to 1

**debug** Used only for debugging.

**direction** 'clockwise' or 'anticlockwise'

**fillColor** Color of the plot area interior.

**height** Height of the chart.

**labels** optional list of labels to use for each data point

**orderMode** None

**other\_threshold** A value for doing thresholding, not used yet.

**pointerLabelMode**

**sameRadii** If true make x/y radii the same(default off)

**simpleLabels** If true(default) use String not super duper WedgeLabel

**slices** collection of wedge descriptor objects

**startAngle** angle of first slice; like the compass, 0 is due North

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**wedgeRecord** callable(wedge,\*args,\*\*kwds)

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**xradius** X direction Radius

**y** Y position of the lower-left corner of the chart.

**yradius** Y direction Radius

### Example

```
def demo(self):
    d = Drawing(200, 100)

    pc = Pie()
    pc.x = 50
    pc.y = 10
    pc.width = 100
    pc.height = 80
    pc.data = [10,20,30,40,50,60]
    pc.labels = ['a','b','c','d','e','f']

    pc.slices.strokeWidth=0.5
    pc.slices[3].popout = 10
    pc.slices[3].strokeWidth = 2
    pc.slices[3].strokeDashArray = [2,2]
    pc.slices[3].labelRadius = 1.75
    pc.slices[3].fontColor = colors.red
    pc.slices[0].fillColor = colors.darkcyan
    pc.slices[1].fillColor = colors.blueviolet
    pc.slices[2].fillColor = colors.blue
    pc.slices[3].fillColor = colors.cyan
    pc.slices[4].fillColor = colors.aquamarine
```

```
pc.slices[5].fillColor = colors.cadetblue
pc.slices[6].fillColor = colors.lightcoral

d.add(pc)
return d
```

### *Properties of Example Widget*

```
background = None
checkLabelOverlap = 0
data = [1, 2.3, 1.7, 4.2]
debug = 0

```

## Pie3d(Pie)

### Public Attributes

**angle\_3d** The view angle.

**background** Handle to background object e.g. Rect(0,0,width,height).

**checkLabelOverlap** If true check and attempt to fix standard label overlaps(default off)

**data** list of numbers defining wedge sizes; need not sum to 1

**debug** Used only for debugging.

**depth\_3d** depth of the pie.

**direction** 'clockwise' or 'anticlockwise'

**fillColor** Color of the plot area interior.

**height** Height of the chart.

**labels** optional list of labels to use for each data point

**orderMode** None

**other\_threshold** A value for doing thresholding, not used yet.

**perspective** A flattening parameter.

**pointerLabelMode**

**sameRadii** If true make x/y radii the same(default off)

**simpleLabels** If true(default) use String not super duper WedgeLabel

**slices** collection of wedge descriptor objects

**startAngle** angle of first slice; like the compass, 0 is due North

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**wedgeRecord** callable(wedge,\*args,\*\*kws)

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**xradius** X direction Radius

**y** Y position of the lower-left corner of the chart.

**yradius** Y direction Radius

### Example

```
def demo(self):
    d = Drawing(200, 100)

    pc = Pie()
    pc.x = 50
    pc.y = 10
    pc.width = 100
    pc.height = 80
    pc.data = [10,20,30,40,50,60]
    pc.labels = ['a','b','c','d','e','f']

    pc.slices.strokeWidth=0.5
    pc.slices[3].popout = 10
    pc.slices[3].strokeWidth = 2
    pc.slices[3].strokeDashArray = [2,2]
    pc.slices[3].labelRadius = 1.75
```

```
pc.slices[3].fontColor = colors.red
pc.slices[0].fillColor = colors.darkcyan
pc.slices[1].fillColor = colors.blueviolet
pc.slices[2].fillColor = colors.blue
pc.slices[3].fillColor = colors.cyan
pc.slices[4].fillColor = colors.aquamarine
pc.slices[5].fillColor = colors.cadetblue
pc.slices[6].fillColor = colors.lightcoral
self.slices[1].visible = 0
self.slices[3].visible = 1
self.slices[4].visible = 1
self.slices[5].visible = 1
self.slices[6].visible = 0

d.add(pc)
return d
```

### *Properties of Example Widget*

```
checkLabelOverlap = 0
data = [12.5, 20.1, 2.0, 22.0, 5.0, 18.0, 13.0]
direction = 'clockwise'
height = 200
labels = None
simpleLabels = 1

startAngle = 90
width = 300
x = 0
xradius = None
y = 0
yradius = None
```

## **WedgeLabel (Label)**

### **Public Attributes**

**angle** angle of label: default (0), 90 is vertical, 180 is upside down, etc

**bottomPadding** padding at bottom of box

**boxAnchor** anchoring point of the label

**boxFillColor** the filling color of the box

**boxStrokeColor** border color of the box

**boxStrokeWidth** border width

**boxTarget** one of ('normal','anti','lo','hi')

**dx** delta x - offset

**dy** delta y - offset

**fillColor** label text color

**fontName** the name of the font used

**fontSize** the size of the font

**height** the height of the text

**leading**

**leftPadding** padding at left of box

**maxWidth** maximum width the label can grow to

**rightPadding** padding at right of box

**strokeColor** label text border color

**strokeWidth** label text border width

**text** the actual text to display

**textAnchor** the anchoring point of the text inside the label

**topPadding** padding at top of box

**visible** True if the label is to be drawn

**width** the width of the label

**x**

**y**

### *Example*

```
def demo(self):
    """This shows a label positioned with its top right corner
    at the top centre of the drawing, and rotated 45 degrees."""

    d = Drawing(200, 100)

    # mark the origin of the label
    d.add(Circle(100,90, 5, fillColor=colors.green))

    lab = Label()
    lab.setOrigin(100,90)
    lab.boxAnchor = 'ne'
    lab.angle = 45
    lab.dx = 0
    lab.dy = -20
    lab.boxStrokeColor = colors.green
```

```
lab.setText('Another\nMulti-Line\nString')
d.add(lab)

return d
```

### *Properties of Example Widget*

```
angle = 0

fontSize = 10
height = None
leading = None
leftPadding = 0
maxWidth = None
rightPadding = 0
strokeColor = None
strokeWidth = 0.1
textAnchor = 'start'
topPadding = 0
visible = 1
width = None
x = 0
y = 0
```

## Functions

### `sample0a( ... )`

Make a degenerated pie chart with only one slice.

#### *Example*

```
def sample0a():
    "Make a degenerated pie chart with only one slice."

    d = Drawing(400, 200)

    pc = Pie()
    pc.x = 150
    pc.y = 50
    pc.data = [10]
    pc.labels = ['a']
    pc.slices.strokeWidth=1#0.5

    d.add(pc)

    return d
```

**sample0b( ... )**

Make a degenerated pie chart with only one slice.

*Example*

```
def sample0b():
    "Make a degenerated pie chart with only one slice."

    d = Drawing(400, 200)

    pc = Pie()
    pc.x = 150
    pc.y = 50
    pc.width = 120
    pc.height = 100
    pc.data = [10]
    pc.labels = ['a']
    pc.slices.strokeWidth=1#0.5

    d.add(pc)

    return d
```

**sample1( ... )**

Make a typical pie chart with with one slice treated in a special way.

*Example*

```
def sample1():
    "Make a typical pie chart with with one slice treated in a special way."

    d = Drawing(400, 200)

    pc = Pie()
    pc.x = 150
    pc.y = 50
    pc.data = [10, 20, 30, 40, 50, 60]
    pc.labels = ['a', 'b', 'c', 'd', 'e', 'f']

    pc.slices.strokeWidth=1#0.5
    pc.slices[3].popout = 20
    pc.slices[3].strokeWidth = 2
    pc.slices[3].strokeDashArray = [2,2]
    pc.slices[3].labelRadius = 1.75
    pc.slices[3].fontColor = colors.red

    d.add(pc)

    return d
```

**sample2( ... )**

Make a pie chart with nine slices.

*Example*

```
def sample2():
    "Make a pie chart with nine slices."

    d = Drawing(400, 200)

    pc = Pie()
    pc.x = 125
    pc.y = 25
    pc.data = [0.31, 0.148, 0.108,
               0.076, 0.033, 0.03,
               0.019, 0.126, 0.15]
    pc.labels = ['1', '2', '3', '4', '5', '6', '7', '8', 'X']

    pc.width = 150
    pc.height = 150
    pc.slices.strokeWidth=1#0.5

    pc.slices[0].fillColor = colors.steelblue
    pc.slices[1].fillColor = colors.thistle
    pc.slices[2].fillColor = colors.cornflower
    pc.slices[3].fillColor = colors.lightsteelblue
    pc.slices[4].fillColor = colors.aquamarine
    pc.slices[5].fillColor = colors.cadetblue
    pc.slices[6].fillColor = colors.lightcoral
    pc.slices[7].fillColor = colors.tan
    pc.slices[8].fillColor = colors.darkseagreen

    d.add(pc)

    return d
```

**sample3( ... )**

Make a pie chart with a very slim slice.

*Example*

```
def sample3():
    "Make a pie chart with a very slim slice."

    d = Drawing(400, 200)

    pc = Pie()
    pc.x = 125
    pc.y = 25

    pc.data = [74, 1, 25]

    pc.width = 150

    return d
```

## spider

### Spider Chart

Normal use shows variation of 5-10 parameters against some 'norm' or target. When there is more than one series, place the series with the largest numbers first, as it will be overdrawn by each successive one.

## Classes

### SpiderChart (PlotArea)

#### Public Attributes

**background** Handle to background object e.g. Rect(0,0,width,height).

**data** Data to be plotted, list of (lists of) numbers.

**debug** Used only for debugging.

**direction** 'clockwise' or 'anticlockwise'

**fillColor** Color of the plot area interior.

**height** Height of the chart.

**labels** optional list of labels to use for each data point

**spokeLabels** collection of spoke label descriptor objects

**spokes** collection of spoke descriptor objects

**startAngle** angle of first slice; like the compass, 0 is due North

**strandLabels** collection of strand label descriptor objects

**strands** collection of strand descriptor objects

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**width** Width of the chart.

**x** X position of the lower-left corner of the chart.

**y** Y position of the lower-left corner of the chart.

#### Example

```
def demo(self):
    d = Drawing(200, 200)
    d.add(SpiderChart())
    return d
```

### *Properties of Example Widget*

```
background = None
data = [[10, 12, 14, 16, 14, 12], [6, 8, 10, 12, 9, 11]]
debug = 0
direction = 'clockwise'
fillColor = None
height = 180
labels = ['a', 'b', 'c', 'd', 'e', 'f']
spokeLabels = <reportlab.graphics.widgetbase.TypedPropertyCollection instance at 0x7f8191d5cea8>
spokes = <reportlab.graphics.widgetbase.TypedPropertyCollection instance at 0x7f8191d5ce18>
startAngle = 90
strandLabels = <reportlab.graphics.widgetbase.TypedPropertyCollection instance at 0x7f8191d5cf38>
strands = <reportlab.graphics.widgetbase.TypedPropertyCollection instance at 0x7f8191d5cd40>
strokeColor = None
strokeWidth = 1
width = 180
x = 10
y = 10
```

## **SpokeLabel (WedgeLabel)**

### **Public Attributes**

**angle** angle of label: default (0), 90 is vertical, 180 is upside down, etc

**bottomPadding** padding at bottom of box

**boxAnchor** anchoring point of the label

**boxFillColor** the filling color of the box

**boxStrokeColor** border color of the box

**boxStrokeWidth** border width

**boxTarget** one of ('normal','anti','lo','hi')

**dx** delta x - offset

**dy** delta y - offset

**fillColor** label text color

**fontName** the name of the font used

**fontSize** the size of the font

**height** the height of the text

**leading**

**leftPadding** padding at left of box

**maxWidth** maximum width the label can grow to

**rightPadding** padding at right of box

**strokeColor** label text border color

**strokeWidth** label text border width

**text** the actual text to display

**textAnchor** the anchoring point of the text inside the label

**topPadding** padding at top of box

**visible** True if the label is to be drawn

**width** the width of the label

**x**

**y**

### *Example*

```
def demo(self):
    """This shows a label positioned with its top right corner
    at the top centre of the drawing, and rotated 45 degrees."""

    d = Drawing(200, 100)

    # mark the origin of the label
    d.add(Circle(100,90, 5, fillColor=colors.green))

    lab = Label()
    lab.setOrigin(100,90)
    lab.boxAnchor = 'ne'
    lab.angle = 45
    lab.dx = 0
    lab.dy = -20
    lab.boxStrokeColor = colors.green
```

```
lab.setText('Another\nMulti-Line\nString')
d.add(lab)

return d
```

### *Properties of Example Widget*

```
angle = 0
bottomPadding = 0
boxAnchor = 'c'
boxFillColor = None
boxStrokeColor = None
boxStrokeWidth = 0.5
boxTarget = 'normal'
dx = 0
dy = 0
fillColor = Color(0,0,0,1)
fontName = 'Times-Roman'
fontSize = 10
height = None
leading = None
leftPadding = 0
maxWidth = None
rightPadding = 0
strokeColor = None
strokeWidth = 0.1
textAnchor = 'start'
topPadding = 0
visible = 1
width = None
x = 0
y = 0
```

## **StrandLabel ( SpokeLabel )**

### **Public Attributes**

**angle** angle of label: default (0), 90 is vertical, 180 is upside down, etc

**bottomPadding** padding at bottom of box

**boxAnchor** anchoring point of the label

**boxFillColor** the filling color of the box

**boxStrokeColor** border color of the box

**boxStrokeWidth** border width

**boxTarget** one of ('normal','anti','lo','hi')

**dR** radial shift for label

**dx** delta x - offset

**dy** delta y - offset

**fillColor** label text color

**fontName** the name of the font used

**fontSize** the size of the font

**format** Format for the label

**height** the height of the text

**leading**

**leftPadding** padding at left of box

**maxWidth** maximum width the label can grow to

**rightPadding** padding at right of box

**strokeColor** label text border color

**strokeWidth** label text border width

**text** the actual text to display

**textAnchor** the anchoring point of the text inside the label

**topPadding** padding at top of box

**visible** True if the label is to be drawn

**width** the width of the label

**x**

**y**

### *Example*

#history <http://www.reportlab.co.uk/cgi-bin/viewcvs.cgi/public/reportlab/trunk/reportlab/graphics/widgets/grids.py>

## Classes

### DoubleGrid(Widget)

This combines two ordinary Grid objects orthogonal to each other.

### Public Attributes

**grid0** The first grid component.

**grid1** The second grid component.

**height** The grid's height.

**width** The grid's width.

**x** The grid's lower-left x position.

**y** The grid's lower-left y position.

#### Example

```
def demo(self):
    D = Drawing(100, 100)
    g = DoubleGrid()
    D.add(g)
    return D
```

#### Properties of Example Widget

```
grid0.delta = 20
grid0.delta0 = 0
grid0.deltaSteps = []
grid0.fillColor = Color(1,1,1,1)
grid0.height = 100
grid0.orientation = 'vertical'
grid0.stripeColors = [Color(1,0,0,1), Color(0,.501961,0,1), Color(0,0,1,1)]
grid0.strokeColor = Color(0,0,0,1)
grid0.strokeWidth = 1
grid0.useLines = 1
grid0.useRects = 0
grid0.width = 100
grid0.x = 0
grid0.y = 0
grid1.delta = 20
grid1.delta0 = 0
grid1.deltaSteps = []
grid1.fillColor = Color(1,1,1,1)
grid1.height = 100
grid1.orientation = 'horizontal'
grid1.stripeColors = [Color(1,0,0,1), Color(0,.501961,0,1), Color(0,0,1,1)]
```

```
grid1.strokeColor = Color(0,0,0,1)
grid1.strokeWidth = 1
grid1.useLines = 1
grid1.useRects = 0
grid1.width = 100
grid1.x = 0
grid1.y = 0
height = 100
width = 100
x = 0
y = 0
```

## Grid(Widget)

This makes a rectangular grid of equidistant stripes.

The grid contains an outer border rectangle, and stripes inside which can be drawn with lines and/or as solid tiles. The drawing order is: outer rectangle, then lines and tiles.

The stripes' width is indicated as 'delta'. The sequence of stripes can have an offset named 'delta0'. Both values need to be positive!

## Public Attributes

**delta** Determines the width/height of the stripes.

**delta0** Determines the stripes initial width/height offset.

**deltaSteps** List of deltas to be used cyclically.

**fillColor** Background color for entire rectangle.

**height** The grid's height.

**orientation** Determines if stripes are vertical or horizontal.

**rectStrokeColor** Color for outer rect stroke.

**rectStrokeWidth** Width for outer rect stroke.

**stripeColors** Colors applied cyclically in the right or upper direction.

**strokeColor** Color used for lines.

**strokeWidth** Width used for lines.

**useLines** Determines if stripes are drawn with lines.

**useRects** Determines if stripes are drawn with solid rectangles.

**width** The grid's width.

**x** The grid's lower-left x position.

**y** The grid's lower-left y position.

### Example

```
def demo(self):
    D = Drawing(100, 100)

    g = Grid()
    D.add(g)

    return D
```

### Properties of Example Widget

```
delta = 20
delta0 = 0
deltaSteps = []
fillColor = Color(1,1,1,1)
height = 100
orientation = 'vertical'
stripeColors = [Color(1,0,0,1), Color(0,.501961,0,1), Color(0,0,1,1)]
strokeColor = Color(0,0,0,1)
strokeWidth = 2
useLines = 0
```

```
useRects = 1
width = 100
x = 0
y = 0
```

## ShadedPolygon(Widget, LineShape)

### Public Attributes

**angle** Shading angle

**cylinderMode** True if shading reverses in middle.

**fillColorEnd** None

**fillColorStart** None

**numShades** The number of interpolating colors.

**overprintMask** overprinting for ordinary CMYK

**points** None

**strokeColor** None

**strokeDashArray** a sequence of numbers represents on and off, e.g. (2,1)

**strokeLineCap** Line cap 0=butt, 1=round 2=square

**strokeLineJoin** Line join 0=miter, 1=round 2=bevel

**strokeMiterLimit** miter limit control miter line joins

**strokeOpacity** The level of transparency of the line, any real number between 0 and 1

**strokeOverprint** Turn on stroke overprinting

**strokeWidth** None

### Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

### Properties of Example Widget

```
angle = 90
cylinderMode = 0
fillColorEnd = Color(0,.501961,0,1)
fillColorStart = Color(1,0,0,1)
numShades = 50
points = [-1, -1, 2, 2, 3, -1]
strokeColor = Color(0,0,0,1)
strokeDashArray = None
strokeLineCap = 0
strokeLineJoin = 0
strokeMiterLimit = 0
strokeOpacity = None
strokeWidth = 1
```

## ShadedRect(Widget)

This makes a rectangle with shaded colors between two colors.

Colors are interpolated linearly between 'fillColorStart' and 'fillColorEnd', both of which appear at the margins. If 'numShades' is set to one, though, only 'fillColorStart' is used.

### Public Attributes

**cylinderMode** True if shading reverses in middle.

**fillColorEnd** End value of the color shade.

**fillColorStart** Start value of the color shade.

**height** The grid's height.

**numShades** The number of interpolating colors.

**orientation** Determines if stripes are vertical or horizontal.

**strokeColor** Color used for border line.

**strokeWidth** Width used for lines.

**width** The grid's width.

**x** The grid's lower-left x position.

**y** The grid's lower-left y position.

### Example

```
def demo(self):
    D = Drawing(100, 100)
    g = ShadedRect()
    D.add(g)

    return D
```

### Properties of Example Widget

```
cylinderMode = 0
fillColorEnd = Color(0,0,0,1)
fillColorStart = Color(1,.752941,.796078,1)
height = 100
numShades = 20
orientation = 'vertical'
strokeColor = Color(0,0,0,1)
strokeWidth = 2
width = 100
x = 0
y = 0
```

## flags

This file is a collection of flag graphics as widgets.

All flags are represented at the ratio of 1:2, even where the official ratio for the flag is something else (such as 3:5 for the German national flag). The only exceptions are for where this would look *\_very\_* wrong, such as the Danish flag whose (ratio is 28:37), or the Swiss flag (which is square).

Unless otherwise stated, these flags are all the 'national flags' of the countries, rather than their state flags, naval flags, ensigns or any other variants. (National flags are the flag flown by civilians of a country and the ones usually used to represent a country abroad. State flags are the variants used by the government and by diplomatic missions overseas).

To check on how close these are to the 'official' representations of flags, check the World Flag Database at <http://www.flags.ndirect.co.uk/>

The flags this file contains are:

EU Members:

United Kingdom, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Holland (The Netherlands), Spain, Sweden

Others:

USA, Czech Republic, European Union, Switzerland, Turkey, Brazil

(Brazilian flag contributed by Publio da Costa Melo [publio@planetarium.com.br]).

## Classes

### Flag(\_Symbol)

This is a generic flag class that all the flags in this file use as a basis.

This class basically provides edges and a tidy-up routine to hide any bits of line that overlap the 'outside' of the flag

possible attributes:

'x', 'y', 'size', 'fillColor'

### Public Attributes

**border** Whether a background is drawn

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** Background color

**kind** Which flag

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

## **Star(\_Symbol)**

This draws a 5-pointed star.

possible attributes:

'x', 'y', 'size', 'fillColor', 'strokeColor'

## **Public Attributes**

**angle** angle in degrees

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

## **eventcal**

This file is a

## **Classes**

### **EventCalendar(Widget)**

## **Public Attributes**

### *Example*

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

### *Properties of Example Widget*

```
data = []
day = 0
endTime = None
height = 150
startTime = None
timeColWidth = None
trackNames = None
trackRowHeight = 20
width = 300
x = 0
y = 0
```

## **signsandsymbols**

This file is a collection of widgets to produce some common signs and symbols.

Widgets include:

- ETriangle (an equilateral triangle),
- RTriangle (a right angled triangle),
- Octagon,
- Crossbox,
- Tickbox,
- SmileyFace,
- StopSign,
- NoEntry,
- NotAllowed (the red roundel from 'no smoking' signs),
- NoSmoking,
- DangerSign (a black exclamation point in a yellow triangle),
- YesNo (returns a tickbox or a crossbox depending on a testvalue),
- FloppyDisk,
- ArrowOne, and
- ArrowTwo

## **Classes**

### **ArrowOne ( \_Symbol )**

This widget draws an arrow (style one).

possible attributes:  
'x', 'y', 'size', 'fillColor'

### **Public Attributes**

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

### **ArrowTwo ( ArrowOne )**

This widget draws an arrow (style two).

possible attributes:  
'x', 'y', 'size', 'fillColor'

### **Public Attributes**

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

### **Crossbox( \_Symbol )**

This draws a black box with a red cross in it - a 'checkbox'.

possible attributes:

'x', 'y', 'size', 'crossColor', 'strokeColor', 'crosswidth'

### **Public Attributes**

**crossColor** None

**crosswidth** None

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

### **DangerSign( \_Symbol )**

This draws a 'danger' sign: a yellow box with a black exclamation point.

possible attributes:

'x', 'y', 'size', 'strokeColor', 'fillColor', 'strokeWidth'

### **Public Attributes**

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

**ETriangle(\_Symbol)**

This draws an equilateral triangle.

**Public Attributes**

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

**FloppyDisk(\_Symbol)**

This widget draws an icon of a floppy disk.

possible attributes:

'x', 'y', 'size', 'diskcolor'

**Public Attributes**

**diskColor** None

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

**NoEntry(\_Symbol)**

This draws a (British) No Entry sign - a red circle with a white line on it.

possible attributes:

'x', 'y', 'size'

**Public Attributes**

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**innerBarColor** color of the inner bar

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

### **NoSmoking(NotAllowed)**

This draws a no-smoking sign.

possible attributes:

'x', 'y', 'size'

### **Public Attributes**

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

### **NotAllowed(\_Symbol)**

This draws a 'forbidden' roundel (as used in the no-smoking sign).

possible attributes:

'x', 'y', 'size'

### **Public Attributes**

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

### **Octagon(\_Symbol)**

This widget draws an Octagon.

possible attributes:

'x', 'y', 'size', 'fillColor', 'strokeColor'

### Public Attributes

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

### **RTriangle(\_Symbol)**

This draws a right-angled triangle.

possible attributes:

'x', 'y', 'size', 'fillColor', 'strokeColor'

### Public Attributes

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

### **SmileyFace(\_Symbol)**

This draws a classic smiley face.

possible attributes:

'x', 'y', 'size', 'fillColor'

### Public Attributes

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

## **StopSign( \_Symbol )**

This draws a (British) stop sign.

possible attributes:

'x', 'y', 'size'

## **Public Attributes**

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**stopColor** color of the word stop

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

## **Tickbox( \_Symbol )**

This draws a black box with a red tick in it - another 'checkbox'.

possible attributes:

'x', 'y', 'size', 'tickColor', 'strokeColor', 'tickwidth'

## **Public Attributes**

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**tickColor** None

**tickwidth** None

**x** symbol x coordinate

**y** symbol y coordinate

## **YesNo( \_Symbol )**

This widget draw a tickbox or crossbox depending on 'testValue'.

If this widget is supplied with a 'True' or 1 as a value for testValue, it will use the tickbox widget. Otherwise, it will produce a crossbox.

possible attributes:

'x', 'y', 'size', 'tickcolor', 'crosscolor', 'testValue'

## Public Attributes

**crosscolor** None

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**testValue** None

**tickcolor** None

**x** symbol x coordinate

**y** symbol y coordinate

## \_\_Symbol(Widget)

Abstract base widget

possible attributes:

'x', 'y', 'size', 'fillColor', 'strokeColor'

## Public Attributes

**dx** symbol x coordinate adjustment

**dy** symbol x coordinate adjustment

**fillColor** None

**size** None

**strokeColor** None

**strokeWidth** None

**x** symbol x coordinate

**y** symbol y coordinate

## Classes

## TableWidget (Widget)

A two dimensions table of labels

### Public Attributes

**alignment** Alignment of text within cells

**borderStrokeColor** table border color

**borderStrokeWidth** border line width

**boxAnchor** location of the table anchoring point

**data** a list of list of strings to be displayed in the cells

**dividerDashArray** Dash array for dividerLines.

**fillColor** table fill color

**fontColor** font color

**fontName** text font in the table

**fontSize** font size of the table

**height** table height

**horizontalDividerStrokeColor** table inner horizontal lines color

**horizontalDividerStrokeWidth** table inner horizontal lines width

**textAnchor** Alignment of text within cells

**verticalDividerStrokeColor** table inner vertical lines color

**verticalDividerStrokeWidth** table inner vertical lines width

**width** table width

**x** x position of left edge of table

**y** y position of bottom edge of table

### Example

```
def demo(self):
    """ returns a sample of this widget with data
    """
    d = Drawing(400, 200)
    t = TableWidget()
    d.add(t, name='table')
    d.table.dividerDashArray = (1, 3, 2)
    d.table.verticalDividerStrokeColor = None
    d.table.borderStrokeWidth = 0
    d.table.borderStrokeColor = colors.red
    return d
```

### Properties of Example Widget

```
alignment = 'right'
borderStrokeColor = Color(0,0,0,1)
borderStrokeWidth = 0.5
boxAnchor = 'nw'
data = [['North', 'South', 'East', 'West'],
        [100, 110, 120, 130],
        ['A', 'B', 'C', 'D']]
dividerDashArray = None
fillColor = None
fontColor = Color(0,0,0,1)
```

```
fontSize = 8
height = 100
horizontalDividerStrokeColor = Color(0,0,0,1)
horizontalDividerStrokeWidth = 0.5
textAnchor = 'start'
verticalDividerStrokeColor = Color(0,0,0,1)
verticalDividerStrokeWidth = 0.25
width = 200
x = 10
y = 10
```

**eanbc**

## Classes

### **Ean13BarcodeWidget (PlotArea)**

#### **Public Attributes**

**background** Handle to background object e.g. Rect(0,0,width,height).

**barFillColor** bar color

**barHeight** Height of bars.

**barStrokeColor** Color of bar borders.

**barStrokeWidth** Width of bar borders.

**barWidth** Width of bars.

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**fontName** fontName

**fontSize** font size

**height** Height of the chart.

**humanReadable** if human readable

**lquiet** left quiet zone length

**quiet** if quiet zone to be used

**rquiet** right quiet zone length

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**textColor** human readable text color

**value** the number

**width** Width of the chart.

**x** x-coord

**y** y-coord

#### *Example*

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

#### *Properties of Example Widget*

```
value = '123456789012'
```

## **Ean8BarcodeWidget ( Ean13BarcodeWidget )**

### **Public Attributes**

**background** Handle to background object e.g. Rect(0,0,width,height).

**barFillColor** bar color

**barHeight** Height of bars.

**barStrokeColor** Color of bar borders.

**barStrokeWidth** Width of bar borders.

**barWidth** Width of bars.

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**fontName** fontName

**fontSize** font size

**height** Height of the chart.

**humanReadable** if human readable

**lquiet** left quiet zone length

**quiet** if quiet zone to be used

**rquiet** right quiet zone length

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**textColor** human readable text color

**value** the number

**width** Width of the chart.

**x** x-coord

**y** y-coord

### *Example*

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
    raise shapes.NotImplementedError, msg
```

### *Properties of Example Widget*

```
value = '1234567'
```

## Classes

### QrCodeWidget (PlotArea)

#### Public Attributes

**background** Handle to background object e.g. Rect(0,0,width,height).

**barBorder** Width of QR border.

**barFillColor** bar color

**barHeight** Height of bars.

**barLevel** QR Code level.

**barStrokeColor** Color of bar borders.

**barStrokeWidth** Width of bar borders.

**barWidth** Width of bars.

**debug** Used only for debugging.

**fillColor** Color of the plot area interior.

**height** Height of the chart.

**strokeColor** Color of the plot area border.

**strokeWidth** Width plot area border.

**value** the text

**width** Width of the chart.

**x** x-coord

**y** y-coord

#### Example

```
def demo(self):
    msg = "demo() must be implemented for each Widget!"
```

```
raise shapes.NotImplementedError, msg
```

#### *Properties of Example Widget*

```
value = 'Hello World'
```
